

ALAGAPPA UNIVERSIT

(A State University Established in 1985) Karaikudi - 630003, Tamil Nadu, India

DEPARTMENT OF INDUSTRIAL CHEMISTRY

M.Sc., CHEMISTRY

[Choice Based Credit System (CBCS)] [For the candidates admitted from the academic year 2019-2020]

Programme general objectives

Chemistry is a pervasive subject. All the branches of science need chemistry. It is an experimental science and students need to train in practicals to get expertise in doing fine experiments and handle sophisticated instruments. Along with the data obtained its statistical analysis is also required to establish authenticity in the fields like environmental science, space chemistry and biotechnology. Hence, Hence our goal in floating the M.Sc programme in Chemistry is to educate the undergraduate students of chemistry in the fascinating fields of chemistry in an effective manner. The general objectives include;

- 1. Develop the skill set necessary to continue on to higher studies such as M.Phil and Ph.D. in Chemistry.
- 2. Can confidently attend and clear competitive examinations especially CSIR NET.
- 3. Become chemistry teachers in educational institutes and scientist in research laboratories

Programme specific objectives

- 1. To provide, thorough well designed studies of theoretical and experimental chemistry, a worthwhile educational experience for all students
- 2. To acquire deep knowledge in fundamental aspects of all branches of chemistry
- 3. To acquire basic knowledge in the specialized thrust areas like Supramolecular chemistry, Materials Chemistry, Chemistry in Nanoscience and Technology etc. and
- 4. To develop abilities and skills that:
 - > are relevant to the study and practice of science,
 - > are useful in everyday life,
 - > are encouraging efficient and safe practice and effective communication.

Programme outcome

- 1. Apply knowledge obtained in Chemistry lecture to problem solving and critical thinking in the laboratory.
- 2. Utilize mathematical knowledge gained from general chemistry to perform common calculations, including mass balance, limiting reagent, and percentyield.
- 3. Engage in safe laboratory practices by handling laboratory glassware, equipment, and chemical reagents appropriately, using general guidelines and basic knowledge about the common hazards associated with them in an organic chemistry laboratory.
- 4. Develop the skill set necessary to continue on to higher studies such as M.Phil and Ph.D. in Chemistry

Transfer of Credits XVIII. Revision of Regulations and Curriculum XIX. Commencement of this regulation XX. Transitory Provision XXI.

I. ELIGIBILITY FOR ADMISSION

A candidate who is a B.Sc. graduate of this University or any recognised University in the main subject/subjects as given below or who has passed an examination accepted by the Syndicate as equivalent thereto is eligible for admission to M.Sc. Chemistry programme.

M.Sc.: B.Sc., Degree Examination with Chemistry / Industrial Chemistry / Applied Chemistry /Chemistry (2any other specialization in Chemistry as main subject of study and any two ofYears)Mathematics, Physics, Botany, Zoology, Computer Application, Microbiology, Applied
Chemistry as ancillary subjects.

The admission is subject to the prevailing rules and regulations for PG admission of this University. The candidate has to undergo this programme in the Department of Industrial Chemistry, School of Chemical Sciences, Alagappa University and complete all the examinations prescribed under the four semesters to qualify for this degree.

II. DURATION OF THEPROGRAMME

The programme is for a period of two years. Each year shall consist of two semesters viz. Odd and Even semesters. Odd semesters shall be from July to November and even semesters shall be from December to April. There shall be 90 working days which shall comprise 540 teaching clock hours for each semester (exclusive of the days for the conduct of University end semester examination).

III. COURSES IN THE PROGRAMME

M.Sc. Chemistry programme consists of number of courses. The term 'course' is applied to indicate a logical part of the subject matter of the programme and invariably equivalent to the subject matter of a "paper" in the conventional sense.

(a) **PROJECT**

Each candidate shall be required to take up a Project Work and submit the report at the end of the second year. The Head of the Department shall assign the Guide who in turn will suggest the Project Work to the student in the beginning of the second year. One typed copy of the Project Report shall be submitted to the University through Head of the Department on or before the date fixed by the University.

The project report will be evaluated by an Internal Examiner and an External, nominated by the University. The candidate concerned will have to defend his project in a Viva-Voce examination.

IV. SEMESTERS

An Academic year is divided into two **semesters.** In each semester, courses are offered in 18 teaching weeks including the duration of conduct of internal examination. Each week has 30 working hours spread over 5 days a week.

V. CREDITS

The term "Credit" refers to the weight age given to a course, usually in relation to the instructional hours assigned to it. For instance, a four hour course is assigned four credits, three hour course is assigned three credits. However, in no instance the credits of a course can be greater that the hours allotted it. The total minimum credits, required for completing a PG programme is 90. The details of credits for individual components are given in Table 1.

Study Components	Number	Credit per Courses	Total	Total	Total
	of courses		Credits	hours	marks
1. Core Courses - Theory	10	5	50	900	1000
2. Core Courses - Practical	4	4	16	576	400
3. Project work (Core)	1	6	6	216	100
4.Elective Courses	5	(2x5)+(1x4)+(2x2)	18	360	500
Total	20		90	2052	2000

Table 1. Details on the number of courses and credits per course

Total working hours = 2052 + 108 (Library, seminar, Yoga, Online courses = 2160 hrs

VI. TEACHING METHODOLOGIES

The classroom teaching would be through conventional lectures and use of Power Point presentations and smart classroom facilities. The lecture would be such that the student should participate actively in the discussion. Student seminars would be conducted and scientific discussions would be arranged to improve their communicative skill.

In the laboratory, instruction would be given for the experiments followed by demonstration and finally the students have to do the experiments individually.

Periodic tests would be conducted and for the students of slow learners would be given special attention.

VII. EXAMINATIONS

- i) There shall be examinations at the end of each semester, for odd semesters in the month of October/November; for even semesters in April/May.
- ii) A candidate who does not pass the examination in any course(s) may be permitted to appear in such failed course(s) in the subsequent examinations to be held in October/November or April/May. However candidates who have arrears in Practical shall be permitted to take their arrear practical examination only along with regular practical examination in the respective semester.
- iii) A candidate should get registered for the first semester examination. If registration is not possible

owing to shortage of attendance beyond condonation limit/regulation prescribed or belated joining or on medical grounds, the candidates are permitted to move to the next semester. Such candidates shall re-do the missed semester after completion of the course.

- iv) Viva-Voce: Each candidate shall be required to appear for Viva-Voce Examination (in defending the Project only).
- v) For the Project Report, the maximum marks will be 75 for project report evaluation and for the Viva-voce it is 25. At the end of fourth semester viva-voce will be conducted on the basis of the Dissertation/Project report submitted by the student. HOD and external examiner will conduct the viva-voce jointlyin the presence of Guide.
- vi) The ESE for the course 536401 Comprehensive Chemistry will be conducted by the HOD at the end of the semester and the final marks will be given to COE. The question paper pattern is as that of CSIR NET examination pattern i.e. 150 objective type questions.
- vi) The results of all the examination will be published through the University Department where the student underwent the programme as well as through University Website.
- vii) Practical examination for M.Sc. Chemistry programme shall be conducted at the end of each semester.

VIII. CONDONATION

Studentmust have earned 75% of attendance in each course for appearing for the examination. Students who have earned 74% to 70% of attendance to be applied for condonation in the prescribed form with prescribed fee. Students who have earned 69% to 60% of attendance are to apply for condonation in the prescribed form with the prescribed fee along with the Medical Certificate. Students who have attended below 60% are not eligible to appear for the examination and they shall redo the semester after completion of the programme, with the prior permission of the Registrar of the University.

IX. QUESTION PAPER PATTERN

(For all theory courses except 536401 Comprehensive Chemistry course)

Time: 3 Hours

Max. Marks: 75

PART-A: 10x2=20

(Answer all questions)

(Two questions from each unit)

Q.No. 1 – 10

PART-B: 5x5=25

(Answer all questions) (One question from each unit with internal choice)

11. a) or b)
12. a) or b)
13. a) or b)
14. a) or b)
15. a) or b)

PART-C: 3x10=30

(Answer any three questions) (One question from each unit) Q.No. 16 – 20

X. EVALUATION

The performance of a student in each course is evaluated in terms of percentage of marks with a provision for conversion to grade points. Evaluation for each course shall be done by continuous internal assessment by the concerned Course Teacher as well as by an end semester examination and

 will be consolidated at the end of the course. The components for continuous internal assessment are:

 Two tests
 - 15marks (Third /repeat tests for genuine candidates/absentees)

 Seminar/Quiz
 - 05 marks

 Assignment
 - 05 marks

 - 25 marks

Attendance need not be taken as a component for continuous assessment, although the student should put in a minimum of 75% attendance in each course. In addition to continuous evaluation component, the end semester examination, which will be a written examination of at least 3 hours duration, would also form an integral component of the evaluation. The ratio of marks to be allotted to continuous internal assessment and to end semester examination is 25:75. The evaluation of laboratory component, wherever applicable, will also be based on continuous internal assessment for 25 marks and on end-semester practical examination 75 marks.

Distribution of marks for practical examinations

(CIA marks 25 + ESE Marks 75 marks)		
ESE mark distribution		
Quantitative/ Qualitative analysis	50 marks	
Viva – Voce in practical	15 marks	
Record Note	10 marks	
Total	75 marks	

Project Work (PW)

Project report evaluation	75 marks
Viva-Voce examination	25 marks
Total	100 marks

(a) Topic:

The topic of the dissertation shall be assigned to the candidate before the end of second semester and a copy of the same should be submitted to the HOD.

(b) Plan of Work:

The student should prepare plan of work for the dissertation well in advance and get the approval of the guide during the first week of third semester of their study. In case the student wants to avail the facility or to carryout part of the work from other University/Research Institute/Laboratories in Industry, they can undertake the work with the permission of the guide and HOD and acknowledge the alien facilities/co-supervisor. The duration of the dissertation research shall be a minimum of three months in the fourth semester. In case the student stays away for work from the Department for more than one month, specific approval of the HOD should be obtained.

(c) No. of copies/distribution of dissertation:

The students should prepare four copies of dissertation and submit the same for the evaluation by Examiners. After evaluation one copy is to be retained in the Department library and one copy is to be submitted to the University, one copy can be given to the guide and one copy can be held by the student.

(f)Format to be followed:

The format/certificate for dissertation to be submitted by the students is given below: Format for the preparation of project work:

(a) Title page

- (b) Bonafide Certificate
- (c) Acknowledgement
- (d) Table of contents

XI. PASSING MINIMUM

A candidate shall be declared to have passed in each course if he/she secures not less than 50% marks in the University ESE and not less than 50% in the aggregate, taking continuous assessment and University Examination marks together.

Candidates, who have secured the pass marks in the end-semester examination (ESE) but failed to secure the aggregate minimum pass mark (50%) are permitted to improve their CIA mark in the following semester and/or in University examinations.

A candidate shall be declared to have passed in the Project work if he/she gets not less than

50% in each of the Project Report and Viva-voce but not less that 50% in the aggregate of both the marks for Project Report and Viva-voce.

A candidate who gets less than 50% in the Project Report must resubmit the Project Report. Such candidates need take again the Viva-Voce on the resubmitted Project.

Improvement of marks - Norms for the Improvement marks

a) Candidates willing to improve his/her performance of marks in the University Examination (other than Practical /Project work) in Theory course shall be permitted to re-appear again in the

succeeding semester examination for the theory course(s) in which he/she has passed in the first appearance.

- b) Improvement of performance of marks is allowed only once of a (theory course) course.
- c) If the candidate shows no improvement in such appearance, marks secured by him/her in the first appearance will remain. No fresh marks statement will be issued in such cases.
- d) If the candidate shows improvement, a revised mark statement will be issued on production of the original mark statement issued to him/her.
- e) On improvement of performance, if a candidate becomes eligible for a higher class/ GPA and CGPA it shall be incorporated/awarded in the mark statement/provisional certificate/degree certificate on an application made by the candidate (along with the original Mark Statement/Provisional Certificate/Degree Certificate) already issued (as the case may be) together with a fee prescribed for the purpose. However, he/she is not eligible for Revision of Rank of for the award of Prize.
- f) Candidates willing to appear for the examination for improvement of marks at his/her last semester examination may await for the result of his/her latest appearance and re-appear twice in the immediately succeeding examination session.
- g) The fee for permission re-appear for improvement of marks is to be paid in addition to the examination fee for each course for which he/she is appearingfor.
- h) The application for permission of re-appearance must be sent separately to the Controller of Examination in the prescribed form duly recommended by the HOD of the College on or before the last date for receipt of application for registration.
- i) Fees paid once by these candidates will not be refunded or adjusted under any circumstances.

XII. GRADING

Once the marks of the CIA and end-semester examination for each of the courses are available, they will be added. The marks, thus obtained will then be graded as per the scheme provided in Table 2.

Marks	Grade Point	Letter Grade
96 and above	10	S+
91 – 95	9.5	S
86 - 90	9.0	D++
81 - 85	8.5	D+
76 - 80	8.0	D
71 – 75	7.5	A++
66 - 70	7.0	A+
61 - 65	6.5	А
56 - 60	6.0	В
50 - 55	5.5	С
Below 50	0	F

Table 2 Grading of the Cours	ses
------------------------------	-----

Grading System

< 50 Marks in all	50 < Your Marks < 60	60 < Your Marks < 75	Your Marks \geq 75
Fail	II Class	I Class	Distinction

From the second semester onwards the total performance within a semester continuous performance starting from the first semester is indicated respectively **Grade Point Average (GPA) and Cumulative Grade Point Average (CGPA).** These two are calculated by the following formulae.

Where 'Ci' is the Credit earned for the course i in any semester; 'Gi' is the Grade Point obtained by the student for the course i and 'n' is the number of courses **passed** in that semester.

CGPA (Cumulative Grade Point Average) = Average Grade Point of all the Courses starting from the first semester to the current semester.

XIV. CONFERMENT OF THE MASTER'S DEGREE

A candidate shall be eligible for the conferment of the Degree only after he/she has earned the minimum required credits for the programme prescribed therefore (i,e. 90 credits).

XV. RANKING: UNIVERSITY RANK EXAMINATION

Candidates who pass all the examinations prescribed for the programme in the first instance and within a period two academic years from the year of admission to the programme only are eligible for University Ranking.

A candidate is deemed to have secured first rank provided he/she

- (i) should have passed all the papers in first attempt itself
- (ii) should have secured the highest overall grade point average (CGPA)

Rank certificate will be issued for a programme as follows:

- a) Only THREE ranks if the students strength is below 20.
- b) Only FIVE ranks if the student strength is above 20 but below 50.
- c) Only TEN ranks if the student strength is above 50 but below 100

XVI. GRIEVANCE REDRESSAL COMMITTEE

The Department shall form a Grievance Redressal Committee for each course with the course Teacher and the HOD as the members. This committee shall solve all grievances relating to the internal Assessment marks of the students.

XVII. TRANSFER OF CREDITS

Students are permitted to transfer their programme credits from Directorate of Distance Education (DDE) of AlagappaUniversity to Regular Stream and Vice-versa, if the PG degree programme is same.

XVIII. REVISION OF REGULATIONS AND CURRICULUM

The University may from time to time revise, amend and change the regulation and the curriculum, if found necessary.

XIX. COMMENCEMENT OF THIS REGULATION

These regulations shall take effect from the academic year 2019-20 i.e., for students who are to be admitted to the first year of the programme during the academic year 2019-20 and thereafter.

XX. TRANSITORY PROVISION

Candidates who were admitted to the M.Sc. Chemistry programme of study from or after 2019-20 shall be permitted to appear for the examinations under the above regulations for a period of four years. Thereafter, they will be permitted to appear for the examination only under the regulations then in force.

Assessment & Evaluation: Student evaluation is based on exams, assignments, Seminar/Quizzes and class participation. The grade allocation is as follows:

Continuous Internal Assessment : 25 Marks		End-Semester Exam: 75 Marks
Two, 2 hour tests for 15 marks in all	Assignments, Seminars for 10 Marks	Three Hour examination on the whole syllabus for 75 Marks.

Attendance: Attendance and participation are vital to the student's success in this course. Students are expected to attend class every day. Minimum attendance to be eligible to take end-semester-examination is 80%.

Punctuality: Punctuality is an essential element in achieving success. Therefore, anyone arriving after daily roll-call (about 5 minutes after the class begins) will be marked absent. A valid excuse for being absent from class shall be a medical or a personal emergency acceptable at the discretion of the Dean/Chairman/Head of the Dept.

Class Participation:Class participation and interaction helps to form a complete educational experience. However, class participation and interaction is to be relevant to course content and context. Deviant behaviour may lead to dismissal or suspension

Submission of Assignments: When submitting any assignments, your name, your student identification number, course number and date of submissionshould be clearly written on every page and all pages should be stapled together. The timely submission of assignments is an essence of personal discipline and will contribute towards forming a person's professional responsibility. The soft copy of the assignment also submitted to the Faculty in charge.

Preparedness: Students are expected to have read and be able to discuss the assigned chapter before attending the lecture. In addition, students should be prepared to discuss homework problems.

Academic Dishonesty: Academic work produced using dishonest methods has no value. Academic dishonesty also includes copying - verbatim or otherwise, and plagiarism i.e., the use of an author's ideas, statements, or approaches without crediting the source. A clear indication of academic dishonesty will result in a grade of "F" being assigned to that particular piece of work.

Subject to change clause: This syllabus, the course schedule and reading assignments are subject to change at the discretion of the Professor to accommodate instructional and/or student needs.

SEMESTER-1					
Course Code: 536101 Subject: INORGANIC CHEMISTRY -I Credits: 5 Hours:90					
Objectives	The major objectives of this course are to understand the con	cepts of:			
	Chemical periodicity, structure and bonding of atoms.				
	Solid state structures and its determination.				
	The structure and packing og inorganic solid state crystal.				
	Basic concepts of coordination chemistry.				
	The formation of coordination compounds by VBT, CFT and	MOT.			
	Extraction, spectral and magnetic properties of lanthanides and	id actinides.			
Unit-I	STRUCTURE AND BONDING, CONCEPT OF ACID A	ND BASES:-	~		
	Chemical periodicity - ionic radii, ionization potentia	, electron aff	inity, electro		
	negativity, concept of hybridization - Molecular orbitals	and electronic	configuration		
	of nomonuclear and neteronuclear diatomic molecules	Transa of ohor	i polyatomic		
	Intermediation forces Dinale memory Letting energy	Types of cher	nical bonds -		
	Haber avala	Born Land eq	uation - Born		
	Bronsted and Lewis concent of acids and bases. Hard and	Soft Acid and	Bases		
	(HSAB) principle– applications-limitations. Non – Aqueous	solvents.	Dases		
Unit-II	COORDINATION COMPOUNDS -I:-				
	Valence Bond Theory-octahedral, square planar and tetral	edral complex	es-limitations		
	of VBT; Crystal Field Theory - splitting of d-orbitals	in square play	nnar, trigonal		
	bipyramidal, octahedral, tetrahedral complexes - factors at	fecting the ma	gnitude of 10		
	Dq, spectrochemical series, crystal field stabilization	energy of oc	tahedral and		
	tetrahedral complexes- distortion of octahedral complexes-Ja	ahn-Teller disto	ortion,		
	applications of CFT; Spinels - structure, classification and sit	e selection.			
Unit-III	COORDINATION COMPOUNDS -1I:-				
	Molecular Orbital Theory – sigma and pi bonding in octahed	ral complexes	•		
	Comparison of VBT, CFT and MOT. Ligand Field Theory,	orief introduction	on to		
	theory beyond MOT (LFT), Extended huckel theory, angular	overlap and set	mi		
	empirical methods.				
Unit-IV	SOLID STATE CHEMISTRY:-	· .· .	1. 6		
	Packing of ions in HCP, FCC and BCC structure – deter	mination of pa	cking fraction		
	in SC, BCC, FCC and HCP structure-density of cubic crysteric structure and subject the structure density of cubic crysteric structure and subject the structure density of cubic crysteric structure and subject to the structure density of cubic crysteric structure density of cubic structure d	stals; limiting r	adius ratio of		
	structure of ionic crustels AP type of crustels Sodiur	ablorido	Zina blanda		
	Wurtzite and Coasium chloride AP type of crystals -Sodium	to Putilo and (Calaium		
	carbide: A.B. type of crystals Anti fluorite: structure of c	ovalent crystal	s graphite		
	and diamond.	ovalent erystar	s graphic		
UNIT-V	CHEMISTRY OF LANTHANIDES AND ACTINIDES				
	Lanthanides- occurrence, position in the periodic table	- electronic co	onfiguration -		
	oxidation states - size relationships -lanthanide contracti	on - spectral :	and magnetic		
	properties - condition compounds of lanthanides - use	s of lanthanic	les and their		
	compounds. Shape of 4f orbitals and CFT of 4f orbitals	. Hydrophilic	stability –		
	triflates as green lewis acids. Actinides: Synthesis of ele	ments - posi	ition in the		
	periodic table, electronic configuration and oxidation sta	tes - spectral	and magnetic		
	properties - comparative account of lanthanides and actinide	5.

Outcomes The student would be able to		
Predict the shape of atoms and chemical bonding.		
To apply the Bronsted and Lewis concept of acids and bases for different explanations.		
Understand the structure of solids having differentratio of atoms.		
Predict the structure and stability of the coordination compounds.		
The formation of complexes based on the various theories.		
Solving of problems about lanthanide and actinides.		

Dr. S. Tambidurai,Professor Dr. G. Gopu, Assistant Professor

SEMESTER – I		
Course Co	de: 536102 SUBJECT: ORGANIC CHEMISTRY - I Credits: 5 Hours: 90	
Objectiv	The major objectives of this course are to understand the concepts of:	
es	To provide, thorough well designed studies of theoretical and experimental	
	chemistry, a worthwhile educational experience for all students	
	To acquire deep knowledge in fundamental aspects of all branches of chemistry	
	F To acquire basic knowledge in the specialized thrust areas like Supramolecular showing Materials Chamisters in Nanassiana and Tashashasa at a specialized thrust areas like Supramolecular showing the specialized thrust	
	and	
	To develop abilities and skills that:	
	 Are relevant to the study and practice of science. 	
	✤ Are useful in everyday life,	
	✤ Are encouraging efficient and safe practice and effective communication.	
	To develop attitudes relevant to science such as:	
	 Concern for accuracy and precision, 	
	• Objectivity,	
	 Integrity, 	
	 Enquiry, Initiative and 	
	 Inventiveness 	
Unit_I	INTRODUCTORY CONCEPTS AND REACTIONS MECHANISM-	
0 mt-1	Basic concepts: Inductive effect, electromeric effect, resonance effect,	
	hyperconjugation, the formalism of curved arrow mechanisms.	
	IUPAC nomenclature: Bicyclic, polycyclic, spiro compounds and heterocyclic	
	compounds.	
	Aromaticity: Concept of aromaticity, delocalization of electrons - Hückel's rule,	
	criteria for aromaticity, examples of neutral and charged aromatic systems – annulenes	
	- NMR as a tool for aromaticity - anti- and homo-aromatic systems- fullerenes (C_{60}).	
Unit-II	PHYSICAL ORGANICCHEMISTRY:- Determination of reaction mechanism: Factors offecting the strength of goids and	
	bases – Bronsted and Lewis concents of acids and bases - Guidelines to propose a	
	reasonable reaction mechanism – Energy profile, intermediate, transition state – kinetic	
	and thermodynamic control – Hammond postulate – methods of determining reaction	
	mechanism - kinetic methods - primary and secondary kinetic isotopic effect - non	
	kinetic methods - isotope labelling, crossover experiment, trapping of intermediates,	
	stereo chemical studies. Mechanism according to free-energy correlation and	
	correspondence with theory of orbital interaction. linear free energy relationship –	
	Curtin-Hammett principle – significance of sigma and rho – Hammett and Taft	
Unit III	SUBSTITUTION AND ELIMINATION DEACTIONS.	
Unit-III	Aliphatic Nucleophilic Substitution: Syl and Syl mechanisms – kinetic and	
	stereochemical features – Neighbouring group participation and nature of nucleophile.	
	solvent polarity, leaving group ability on the course of the reactions $-S_N I$ reaction -	
	Allylic and vinylic substitution.	
	Aliphatic electrophilic substitution: Mechanism of aliphatic electrophilic substitution	
	reactions $-S_E 1$, $S_E 2$ and $S_E I$ mechanisms.	
	Elimination Reactions: E_1 , E_2 , E_1CB mechanisms - Stereochemistry of elimination -	
	Hofmann and Zaitsev rules - Competition between elimination and substitution. Bredt's	
	rule.	
	alkylation acylation and diazonium coupling orientation and reactivity	
	Aromatic Nucleonhilic substitution: The benzvne intermediate mechanism aromatic	
	nucleophilic substitution of activated halides-Ziegler alkylation.	

Introduction to molecular symmetry and chirality - axis, plane, centre, alternating axis of symmetry. Stereoisomerism - definition based on symmetry and energy criteria - configuration and conformational stereoisomers. Center of chirality - molecules with C, N, S based chiral centers -absolute configuration -Sawhorse, Fischer and Newman projections, interconversion of projections - racemic modifications - R and S nomenclature using Cahn-Ingold-Prolog rules - molecules with a chiral center and Cn -molecules with more than one center of chirality -definition of diastereoisomers- constitutionally symmetrical chiral molecules- erythro and three nomenclature - E and Z nomenclature - out/in isomers. UNIT-V CONFORMATONALANALYSIS AND REACTIVITY:- Conformational analysis: Introduction to conformation of acyclic and cyclic (5 and 6 membered rings) systems, A-strains and anomeric effect, decalins, transannular interactions in medium size rings. Conformation and reactivity: steric and electronic effects in syn-elimination, E2 elimination and neighboring group participation (Woodward, Prevost methods) of acyclic and cyclohexyl systems, seterification, substitution reaction and formation and opening of epoxide in cyclohexyl systems (Furst Plattner rule). SEMESTER – I		
Course Cod	e: 536103 SUBJECT: PHYSICAL CHEMISTRY-I Credits: 5 Hours: 90	
Objectives	The major objectives of this course are to understand the concepts of:	
	Quantum Chemistry will be applied to understanding the basic energetics of	
	atoms and molecules.	
	Covers the fundamental principles and operation of symmetry molecules, study of	
	group theory.	
	This unit covers the principles of chemical kinetics, including differential rate	
	laws, derivation of exact and approximate integral rate laws for common	
	Elementary reactions.	
	Family with basic concepts in thermodynamics and to relate the observatoristics and relative energies of different liquid and solid solutions to the	
	nhase diagram of the system	
	 An overview of excited state chemistry focuses on the theory of electron transfer 	
	process.	
Unit-I	FUNDAMENTAL OF OUANTUM CHEMISTRY:-	
	Basic principles of quantum mechanics: Postulates of quantum mechanics, wave	
	functions and probabilities, Black-body radiation, Photoelectric effect, Planck's	
	radiation law, Compton effect, Atomic hydrogen spectra, The Bohr model, Wave-	
	particle duality of material particles and de Broglie's hypothesis, Quantisation of	
	angular momentum, Heisenberg's uncertainty principle.	
	Quantum mechanics: Schrodinger equations, Operator algebra: Operators, linear	
	and hermitian, Eigen functions and Eigen values.	
Unit-II	GROUP THEORY:-	
	Symmetry elements and symmetry operations Centre of symmetry, Plane and its	
	types of Symmetry, Floper and improper axis of Symmetry, Finicipal axis and subsidiary axes. The concept of groups Assigning Point groups with illustrative	
	examples Symmetry operations and order of a group - Group theoretical rules (Group	
	postulates), reducible and irreducible representations, matrix representations of	
	symmetry operations, Construction of Character Tables for C_{2V} and C_{3V} point group	
	molecules, and Great orthogonality theorem and its proof.	
	Application of group theory to atomic orbitals in ligand fields, molecular orbitals,	
	hybridization.	
Unit-III	THEORIES OF CHEMICAL KINETICS:-	
	Theories of Reaction Rates: Rate laws and rate constants, reaction order,	
	determination of rate law, reactions approaching equilibrium, temperature	
	dependence of reaction rates, Armenius parameters, consecutive elementary	
	reactions, steady-state approximation, Kinetic isotope effect.	
	velocity Nernst-Finstein equation Stokes-Finstein equation Complex reactions	
	Chain reactions.	
	Unimolecular reactions: Lindemann- Hinshelwood mechanism and activation energy	
	of a composite reaction.	
	Elementary Reactions in Solutions: Activated complex theory; Bronsted-Bjerrum	
	equation - Primary and secondary salt effects, Eyring equation.	
Unit-IV	THERMODYNAMICS:-	
	Chemical Thermodynamics: Thermodynamic properties, Boyle's Laws, Ideal-gas	
	absolute temperature scale, Reversible and irreversible P-V works, first law of	
	thermodynamics, Joule-Thomson experiments, Second law of thermodynamics,	
	Carnot's principle, Gibbs and Heimholtz energies, The Maxwell relations, Le	
	Chatcher principle. Solids: Thermodynamics of solids. Einstein and Dahya models. T^3 denoted area of	
	beat capacity of solids at low temperatures (universal feature)	
	Metals: Fermi function Fermi energy free electron model and density of states	
	rectais, i erni function, i erni energy, nee electron model and density of states,	

	chemical potential of conduction electrons.		
UNIT-V	PHOTOCHEMISTRY AND SOLAR ENERGY CONVERSION:-		
	Photochemistry: Photochemical laws, Quantum yield, Electronically excited states,		
	Jabionski diagram, Radiation less processes, Energy level diagrams, Assignment of n, π^* and π π^* configurations. Forbiddon		
	Phosphorescence Emission lifetimes Mechanism of energy transfer Marcus theory		
	of electron transfer. Free energy and rate relation. RehmWeller behaviour. Marcus		
	Inverted Region.		
	Solar energy conversion: Solar cell structure, materials and properties, Solar cell		
	fabrications, Dye sensitized solar cells, efficiency and measurements.		
REFERENC	CES AND TEXTBOOKS:-

New	York: PrenticeHall International Inc.		
Outcomes	The student would be able to:-		
	Recognize the importance of quantum chemistry and of its applications.		
	Describe and understand the fundamentals of group theory.		
	> Describe the fundamental chemical and physical properties that determine		
	chemical reaction rates.		
	> Understanding the use of free energies as equilibrium criteria and also determine		
	the equilibrium state of a wide range systems, ranging from mixture of gases and		
	mixture of liquids and solids that can each include multiple components.		
	> Describe and explain common photochemical and photo physical processes and		
	mechanisms and explain solar energy conversion.		

Dr. G. Paruthimal Kalaignan, Senior Professor

Dr. T. Stalin, Assistant Professor

SEMESTER – I					
Course Code	:	SUB	JECT: INORGANIC CHEMISTRY	Credits: 4	Hours:144
536104		PRA	CTICAL		
Objectives	 The major objectives of this course are to understand the concepts of: This course will help in developing practical skill with reference to EDTA an Redox titrations method of analysis of metal ions and synthesis and studies of some properties of co-ordination complexes. 			to EDTA and and studies of	
1.	Quantitative Analysis:- a) EDTA titrations: (i)Ca, (ii)Mg, (iii)Ni and (iv) Zn. b) Redox titrations: Fe(II) vs Ce(IV), Fe(II) vs dichromate and NO ² -vs Ce(IV).				
2.	 Preparation and Analysis of Coordination Complexes a) Preparation of co-ordination complexes by double stage method (Any Four). b) Characterization of the prepared complexes. > Solubility. > Melting point. > UV spectroscopy. > Infrared spectroscopy. > Thermal analysis. > Spectrocolorimetry

SEMESTER – II					
Course Code:		SUBJECT: INORGANIC CHEMISTRY –II	Credits: 4	Hours: 90	
536201					
Objectives	The ma	jor objectives of this course are to understand the c	oncepts of:		
o sjeen es	> Prec	lict their structures and bonding found in inorganic	rings.		
	► To d	listinguish isopolyacids from heteropolyacids.	e		
	► Kno	 Know about the basic mechanism of nuclear reactions. 			
	➤ Subs	stitution reactions in octahedral and square planar co	mplexes.		
Unit-I	MAIN (GROUP ELEMENTS:-	-		
	Compou	nds of alkali and alkaline earth metals- preparat	ion and uses.	Catenation -	
	heteroca	tenation - intercalation chemistry - Poly anior	ns and isopol	y anions of	
	Phospho	rous, Vanadium, Chromium, Molybdenum and Tu	ungsten, hetero	poly anions	
	of Mol	ybdenum and Tungsten. Hydrides, oxides and	l oxy acids	of nitrogen,	
	phospho	rous, sulphur; phosphines, phosphazines, sul	phur-nitrogen	compounds.	
	Silicates	, borazines and boron nitrides – Heterogenous cata	alysis – Zeolite	es – structure	
	and reac	tivity.			
Unit-II	CAGES	AND METAL CLUSTERS:-			
	Inorgani	c chains - rings - cages and clusters -Chemistry	of boron – bo	orane, higher	
	boranes,	carboranes, Structure and bonding in	polyhedral b	oranes and	
	carborar	nes, metalloboranes, metallocarboranes, styx notati	on; Wade's r	ule; Jemmis	
	MNO r	ule in polyhedral boranes. electron count in pol	yhedral boran	es; isolobal	
	analogy;	Metal clusters - dinuclear clusters - trinuclear cluster	ers - tetranuclea	ar clusters	
	- nexanu	clear cluster. Metal Organic Framework – basics and	applications.		
Unit-III	LIGAN	D SUBSTITUTION REACTIONS IN COMPLEX	ES:-	abadral	
	a ypes of	substitution feators officing equation: base hydroly	chamshi in octa	hasa	
	mechani	sm anation reactions substitution reactions without 1	breaking metal.	ligand	
	bond Ste	prochemistry of substitution reaction in octahedral co	mplexes Subs	titution	
	reactions	s in square planar complexes - Trans effect – uses: the	eories of trans e	effect-	
	electrost	atic polarization theory - pi bonding theory: factors a	ffecting the rate	e of	
	substitut	substitution reactions- isomerisation in planar complexes: electron transfer reactions			
	in coordination compounds - inner sphere mechanisms - outer sphere mechanisms -				
	complen	nentary - non-complementary electron transfer react	ion mechanism	ι.	
Unit-IV	METAI	CARBON BONDING:-			
	Review	of formalisms such as oxidation state, 18-electro	on rule, classe	s of ligands,	
	Valence	electron count (16/18 electron rules); Metal carbor	n bond types- S	Structure and	
	bonding	. Structure and bonding in mono and polynuclear i	metal carbonyl	s; substituted	
	metal ca	arbonyls and related compounds; reactivity of m	netal carbonyls	; vibrational	
	spectra o	of metal carbonyls; dinitrogen and dioxygen as ligar	nds in organom	etallic	
	compour	nds. Wades rule and isolobal relationship. Nitrosyl	s: terminal bri	dging and	
	bent.				
UNIT-V		AR CHEMISTRY:-		1 1 1 1	
	Radioac	uve decay - Nuclear structure: mass-energy rel	lationship, huc	viear binding	
	turnes	f muclear reactions photomuclear anallatic	y-cross reaction	tation and	
	types 0	uclear reaction Nuclear fission and Eusion: Pro	h, mansinu	and charge	
	distribut	ion Nuclear reactors and their uses for power p	roduction nucl	lear fusion -	
	condition	ns necessary - energy released in fusion - ste	eller energy	Usage of	
	radioisot	topes in neutron activation analysis and isotopic d	ilution analysis	s radioactive	
	waste m	anagement and disposal.	unurjon	,	
REFEREN	CES AND	TEXTBOOKS:-

Sodhi, G. S. (2006). Inorganic Chemistry (Ist ed.) VB (P) Ltd.		
Outcomes The students will have advanced knowledge in:-		
The substitution reactions in complexes and its uses.		
➤ The chemistry of cages and clusters.		
▶ 18-electron rule for mono- and poly-nuclear complexes and bonding nature of		
alkenes and alkynes to metals.		
\succ They will have expertise in nuclear reactions and its radio isotopes application.		

Name of the Course Teacher Dr. G. Gopu, Assistant Professor Dr. N. Sengottuvelan, Assistant Professor

	SEMESTER – II
Course Cod	:: 536202 SUBJECT: ORGANIC CHEMISTRY- II Credits: 5 Hours: 90
Objectives	The major objectives of this course are to understand the concepts of:-
	> The course deals primarily with principles to understand the preparation,
	properties, stability and reactivity of intermediates formed during organic
	reactions.
	Emphasis is on the construction of organic compounds through the reactive
	intermediates.
	You will be taught on the basic concepts on how an organic compound
	undergoes photochemical or pericyclic reactions.
Unit-I	CARBANIONS AND ADDITION REACTIONS :-
	C-A bond $(X = C, O, N)$ formations through the intermediacy of Carbanions
	and heren analates in aldel and Michael reactions. Alleylation and aculation
	and boron enolates in additions to carbonyls and starsoshamical aspects through
	various models (Crom / Crom chalation / Falkin Anh models): Organolithium
	Organomagnesium Organozine Organoconner reagents (restricted to 14-addition)
	in synthesis Name reactions under carbanion chemistry - Claisen Dieckmann
	Knoevenegal Stobbe Darzen Acyloin condensations Shapiro reaction Juliz
	olefination. Peterson olefination.
	Ylides: Chemistry of Phosphorous and Sulfurylides.
Unit-II	MOLECULAR REARRANGEMENTS:-
	Classification of Rearrangements- Electron deficient and electron rich skeleta
	rearrangementsWagner-Meerwein, Pinacol-pinacolone, semi-pinacol rearrangement
	Migratory attitude- Memory effect-C-C bond formation involving carbocations
	Oxymercuration, halolactonisation.
	Stevens-Wittig-Sommelet-Hauser-Grovenstein-Zimmermann rearrangements, non-
	cyclic rearrangements, Chapman - Wallach rearrangement.
	Carbenes and Nitrenes: Structure of carbenes, generation of carbenes, addition and
	insertion reactions, rearrangement reactions of carbenes such as Wolf
	rearrangement, Structure of nitrene, generation and reactions of nitrene and related
	electron deficient nitrogen intermediates, Curtius, Hoffmann, Schmidt, Beckmann
	rearrangement reactions.
Unit-III	STEREOCHEMISTRY AND REACTIVITY:-
	Stereoselectivity: Classification, terminology, principle of stereoselectivity
	Examples of diastereoselectivity using Cram, Cram-Chelate, Feikin-Ann, and Freikin
	transitionatetes, cleptak and callon coordination models, and zimmerman-frazien
	matheds of determination of absolute configuration
	Tonicity and prostereoisomerism-tonicity of ligands and faces and their
	nomenclature – NMR and Steroisomers- Axial planar and helical chirality –
	examples – stereochemistry and absolute configuration of allenes hinhenvis and
	binanhthyls ansa and cyclophanic compounds spiranes exo-cyclic alkylidene
	cycloalkanes.
Unit-IV	RADICALS AND PHOTOCHEMICAL REACTIONS:-
	Radicals: Generation of radical intermediates and its (a) addition to alkenes, alkynes
	(inter & intramolecular) for C-C bond formation and Baldwin's rules(b) olefin
	metathesis(c) fragmentation and rearrangements.
	Organic Photochemistry: Thermal versus photochemical reactions - Photochemica
	reactions of Ketones - Norrish I and II type reactions - Photoreduction - Paterno
	Buchi reaction - Photosensitization - Reactions of $\hfill\square$ unsaturated ketones -
	isomerization and cycloadditions - cis-trans isomerisation of simple olefins - di-pi-
	methane rearrangement - Photooxidation - Oxidative coupling- Sandmeyer reaction,

	Gomberg-Bachmann reaction, Pschorr reaction, Ullmann reaction and Hunsdiecker reaction Barton deoxygenation and decarboxylation and McMurry coupling		
UNIT V	CONCERTED REACTIONS.		
UNIT-V	Pericyclic Reactions: Classification electrocyclic sigmatronic cycloaddition		
	chelotronic and ene reactions. Woodward Hoffmann rules Frontier Orbital and		
	Orbital symmetry correlation approaches examples highlighting pericyclic reactions		
	in organia synthesis such as Claisen. Cone Dials Alder and Ene reactions (with		
	in organic synthesis such as Claisen, Cope, Diels-Alder and Elle reactions (with		
	Stereochemical aspects), introductory dipolar cycloaddition.		
	Decomposition of evaluation are compounded bate eliminations, involving evaluations		
	transition states such as sulfavides, colonovides. N avides, costates venthetes		
	dialisation states such as suffoxides, selenoxides, in-oxides, acetates, xantilates

Outcomes	The students will have advanced knowledge in:-		
Outcomes	Inderstand and be able to apply and evaluate simple organic reaction		
	transformations functional group interconversion and C-C bond formation		
	reactions		
	Understand the scope and limitations as well as the mechanisms of organic		
	reactions		
	 Understand the importance of photochemistry and periovelicreaction 		
	 Describe and explain currently held views of chemical reactions and account for 		
	the chemical reactivity of different reagents and intermediates		
	the entimedial reactivity of different reagents and interintediates.		

Dr. S. Viswanathan, Assistant Professor Dr. S. Umadevi, UGC Assistant Professor

SEMESTER – II		
Course Cod	e: 536203 SUBJECT: PHYSICAL CHEMISTRY-II Credits: 5 Hours: 90	
Objectives	 The major objectives of this course are to understand the concepts of:- To study the wave properties, one-dimensional potentials, three-dimensional centrosymmetric potentials and also examines perturbation theory. Provides a mathematical tool for studying symmetries of various molecules and their spectroscopy application of group theory. To study the solution and gas phase kinetics and some fast reaction kinetics. To study adsorption isotherm for adsorption on to solid surfaces and to understand heterogeneous catalysis. 	
Unit-I	QUANTUM CHEMISTRY:-	
	Application of wave mechanics: Rigid rotor, harmonic oscillators, shapes of orbitals, shape quantization. Solution of the Schrodinger equation for exactly solvable problems for bound states such as particle-in-a- box, particle-in-a-ring, distortions, John-teller effect, quantum numbers, zero-point energy, tunneling, perturbation theory.	
Unit-II	SPECTROSCOPY APPLICATION OFGROUP THEORY:-	
	Spectroscopy application: Direct product representation, Spectroscopy application of group theory to IR spectral activity of vibrational modes of ammonia molecule, selection rules for vibrational IR and RAMAN spectra, Mutual exclusion rule for molecules with center of symmetry, selection rules for rotational spectroscopy. Selection rules for n- π^* and π - π^* transitions in formaldehyde molecule. SALC procedure, Applications of SALC procedure to ethylene and butadiene molecules.	
Unit-III	CHEMICAL KINETICS:-	
	 Solution and gas phase kinetics: Chain reactions and its rate laws, Hydrogen- bromine reaction, chain-branching explosion reactions, Polymerization kinetics: stepwise and chain polymerizations. Homogeneous catalysis: Features of acid-base catalysis. Enzymes: Michaelis-Menten mechanism of enzyme catalysis, Salt effects, catalytic efficiency of enzymes, Enzyme reaction, mechanisms of enzyme inhibition. Fast reaction kinetics: Relaxation methods (T- and P-jump methods), Stopped flow methods, Shockwave technique, Flash photolysis. 	
Unit-IV	CLASSICAL THERMODYNAMICS:- Thormodynamics concent of entrony reversible and irreversible	
	Thermodynamics concept: Concept of entropy, reversible and irreversible processes, Free energies. Fundamental equations for open systems, Partial molar quantities and chemical potential, Gibbs-Duhem equation, Real gases and Fugacity. Thermodynamics of ideal and non-ideal solutions: Liquid-liquid solutions, liquid-solid solutions, multi component systems and mean ionic activity coefficients. Debye-Huckel limiting law and its extensions, Applications of Debye-Huckel Theory.	
UNIT-V	SURFACE CHEMISTRY AND HETEROGENEOUS CATALYSIS:-	
	Surface and interfaces: Surface tension, solid-liquid interfaces; contact angle and wetting; Solid-gas interface; Physisorption and chemisorptions, Freundlich, Gibbs, Langmuir, and BET adsorption isotherms; Surface area determinations. Surface relaxation and reconstruction; Dynamics and energetics of surfaces. Heterogeneous catalysis:Kinetics of surface reactions involving adsorbed species, Langmuir-Hinshelwood mechanism, Langmuir-Rideal mechanism, Rideal-Eley mechanism, Basic aspects of semiconductor catalysis and applications. Model catalysts: Ammonia synthesis; Hydrogenation of carbon monoxide; Hydrocarbon conversion.

Outcomes The students will have advanced knowledge in:-
Recognize the importance of quantum chemistry and of its applications.
Describe and understand the basic group theory and its applications.
> Understanding the use of free energies as equilibrium criteria and also determine
the equilibrium state of a wide range systems, ranging from mixture of gases and
mixture of liquids and solids that can each include multiple components.
Understanding and analyze the chemical reactions at surfaces and interfaces.

Dr. T. Stalin, Assistant Professor Dr. M. Muthumareeswaran, DST Inspire Faculty

		SEMESTER – II				
Course	rse SUBJECT: Credits: 4 Hours:					
Code:53620	04 ORGANICCHEMISTRYPRACTICAL					
Objectives	Th	e major objectives of this course are to understand the co	ncepts of:-			
		> Develop practical skill with reference to organic qualitative analysis and organic				
		preparations.				
		Know the extraction of organic compounds from natur	al products			
		Understand how to solve the structure of organic compo	ounds using			
		spectroscopies.	0			
UNIT-I	Qı	alitative analysis:-				
	Se	paration and Identification of components in a two compo	onent mixture	and		
	pre	paration of their derivatives. Determinations of boiling p	oint/melting p	point for		
		mponents and melting point for their derivatives.				
UN11-11		Benzanilide from benzonhenone				
	*	Eosin from phthalic anhvdride.				
	*	Methyl orange from Aniline.				
	*	Benzoic acid from Aniline.				
UNIT-III	Th	in layer and Column Chromatographic separation of	mixtures of o	organic		
	co	mpounds:-				
		 Purification of anthracene. Senaration of aminoacida 				
		 Separation of annihologital sciences. Separation of benzoic acid from benzaldehyde 				
UNIT-IV	Extraction of natural products such as					
011111	 Piperine, Casein, Caffeine. 					
UNIT-V	Identification of functional groups of organic compounds prepared and					
	extracted.					
		 UV-VIS spectra of L, L-unsaturated carbonyl system ET IB spectra of few organic compounds 	ns.			
		 FIT IN spectra of Iew organic compounds. Determination of C H N S O in an organic compounds. 	ind using eler	mental		
	analyser.		nentai			
REFERENC	CES	AND TEXTBOOKS:-

III, 2e (pb).Pearson Education Asia.						
Vogel, A.I. (2011). Elementary practical organic chemistry: Qualitative organic analysis Part-II.			sis Part-II.			
Pearson Education Asia.						
Outcomes	Th	e student would have through practical knowledge in the				
		Separation of organic mixture and identification of org	anic compou	nds.		
		Double stage preparations.				
		Chromatographic separations.				
		Extraction of compounds from natural products.				
		Confirmation of structure of organic compounds using	, spectroscopi	c methods.		

Name of the Course Teacher Dr. M. Sundrarajan, Assistant Professor Dr. S. Viswanathan, Assistant Professor

SEMESTER – III					
Course	Course SUBJECT: ADVANCED INORGANIC Credits: 5 Hours: 9				
Code:53630	1	CHEMISTRY			
Objectives	The ob	ectives are to understand the advanced concepts of:-			
Objectives	→ Svi	thetic procedure of metal alkyl, alkene, alkyne, and a	rene complxe	s.	
	⊳ To	describe the various organometallic reaction mechan	isms.		
	> Sp	ectral and magnetic properties of octahedral complexe	es.		
	▶ Dis	 Distribution of metal ions in bioligands. 			
	► Ro	le of metals in medicine and their structure and proper	ties.		
Unit-I	SYNTI	HESISOF ORGANOMETALLICCOMPLEXES:-			
	Synthe	sis and reactivity of metal alkyls, alkene, alkynd	es and com	plexes; pi-	
	comple	xes with olefins, acetylenes. Metal (W, Cr, Rh, Ru	, Mo) carben	e complexes,	
	Fischer	, Schrock and Grubbs type carbene complexes, co	mparison of t	their stability	
	and reactivity, simple and cross metathesis reactions, ring opening, ring closir			ring closing	
	metathesis in organic synthesis, Alkene complexes - synthesis by ligand			by ligand	
	substitution, reaction with metal salt-structure and bonding with transition metals;			sition metals;	
	cyclopentadienyl complexes- bonding with transition metals- metallocenes-				
	ferroce	ne; Metal arene complexes- synthesis and reactivity.			
Unit-II	REAC	TIONS OF ORGANOMETALLIC COMPLEXES	:-		
	Reactio	n mechanism- Ligand substitution, oxidative addit	ion, reductive	elimination,	
	migrate	bry insertion and hydride elimination, transmeta	llation, Nucl	eophilic and	
	Electro	philic attack on coordinated ligands in organometa	llics. Fluxion	al molecules.	
	Catalys	is - Hydrogenation, Hydroformylation, hydrosilatio	n, Hydrocyna	ation, pauson	
	Khand reaction, Monsanto process, Wacker process, alkene polymerization-Ziegler-				
TT •/ TTT	Natta Polymerisation. Protection of double and triple bond.				
Unit-III	SPECIRAL AND MAGNETIC PROPERTIES OF COMPLEXES:-				
	orbit (I	S) coupling scheme Hund's rule. Hole Formulati	ng the Energy	of the term	
	symbol	for a d^2 configuration. Electronic spectra of tran	sition metal	complexes	
	Laporte	orbital' selection rule spin selection rule Charac	teristics of d-	d transitions	
	Nephel	auxetic effect, energy level diagrams of Orgel and	Tanabe- Suga	no Diagrams	
	of octahedral complexes with $d^2 \& d^8$ configuration Magnetic susceptibility - Gouv			bility - Gouv	
	balance, VSM and SQUID magnetometry, Magnetic properties of coordination				
	compounds -dia, para – ferro and antiferromagnetism – spin cross over phenomena.				
	Spin contribution to magnetic moment, orbital contribution to magnetic moment, Spin-				
	Orbital coupling. Importance of symmetry in the reduction of orbital				
	contribution to the magnetic moment of transition metal complexes.				
Unit-IV	BIOINORGANIC CHEMISTRY:-				
	Essenti	al and trace metal ions in biology and their distrib	oution -bioliga	ands - amino	
	acids,	proteins, nucleic acids, nucleotides and their poten	tial metal - ł	binding sites;	
	Metal	storage and transport - molecular mechanism o	f ion trans	port across	
	membr	anes - ionophores. Na^+ /K ⁺ pump.Electron tr	ansport, Moi	100xygenase,	
	dioxyg	enase, phosphorylase, reductase, Processes in Photo	osynthesis – I	Photosystems	
	I and I	I. Metals in medicine - therapeutic applications of	<i>cis</i> -platin, r	adio-isotopes	
	(e.g., Tc & I ₂) and MRI agents. Toxicity of metals –Al, Cd, Hg and Cr toxic effects		c effects		
	with sp	ecific examples, detoxification by chelation.			
UNIT-V	META	LLOENZYMES AND METALLOPROTEINS:-			
	Transp	ort & Storage of Dioxygen- Heme proteins & oxy	gen uptake,	structure and	
	tunctio	ns othaemoglobin, myoglobin, hemocyanins &	hemerythri	n. Perutz	
	mechar	nism showing structural changes in porphyrin ring	system. Oxy	genation and	
	aeoxyg	enation. vietallo enzymes- The principle involved a	nu role of va	rious metals	
	in 1) Z	Inc containing enzymes-carboxypeptidase-A and ca	amutaca internet	rase. 11) Fe-	
	enzyme	- Cytochrome P-450 m) Cu-enzyme:-Super Oxide di	sinutase iv) C	o-enzyme	

- Vit.B12.Electron transfer in Biology- Structure and functions of metalloproteins in						
electron transfer proteins, cytochromes & Fe-S proteins, Non-heme iron proteins;						
Rubredoxins, Biological Nitrogen fixation (in vitro and in vivo) Structure and						
properties of Chlorophyll.

Outcomes The students will have advanced knowledge in:-						
Predict the reaction mechanisms of organometallic complexes and catalysis.						
To appreciate the uses of organometallic complexes.						
The electron transitions in complexes and its effect on magnetic properties.						
➤ The role of metalloenzymes and metalloproteins.						

Name of the Course Teacher Dr. S. Tambidurai, Professor Dr. G. Gopu, Assistant Professor

	SEMESTER – III		1
Course	SUBJECT: ADVANCED ORGANIC	Credits: 5	Hours: 90
Code:536302	CHEMISTY		
Objectives	The primary objective of this course is to introduce the concepts of organic chemistry and to develop critical thin are:-	student to king skills. T	the advance The objective
	 To learn the about the oxidizing and reducing reagents in To learn the mechanisms of modern organic synthesis. 	n organic synt	thesis.
	To be familiar with the retro synthetic analysis and the ro in organic reactions.	ble of protection	ng groups
	 To understand the importance of target molecules and th To be able to interpret the reaction pathways. 	ieir synthesis.	
	To begin to be able to do multiple step transformations molecules, i. e. begin to learn organic synthesis and perfor analysis.	of simple org orm retro-synt	ganic hetic
Unit-I	OXIDIZING REAGENTS IN ORGANIC SYNTHESIS: - Metal based and non-metal based oxidations of alcohols	to carbonyls	(Cr, Mn, A
	hypervalent iodine and TEMPO based reagents), phen carbonate), alkenes to epoxides (peroxides/per acids base epoxidation, alkenes to diols (Mn, Os based), Sharpless as Prevost reaction and Woodward modification, alkenes cleavage (Os and Ru,ozonolysis), alkenes to alcohols/carbon cleavage (hydroboration-oxidation, Wacker oxidation, Se, oxidation) and ketones to ester/lactones (Baeyer-Villiger).	ols (Fremy's ed), Sharpless ymmetric dif to carbonyls yls without b Cr based all	s salt, silves s asymmetri nydroxylation with bon ond ylic
Unit-II	REDUCING REAGENTS IN ORGANIC SYNTHESIS:- Catalytic hydrogenation- Heterogeneous: Pd/Pt/Rh/Ni, Homogeneous, Wilkinson, Li/Na/Ca in liquid ammonia - Birch, Pinacol formation, McMurry, Acyloin formation, dehalgenation and deoxygenations, Hydride transfer reagents from Group III and Group IV in reductions – LiBH ₄ , NaBH ₄ , triacetoxyborohydride, L-selectride, K-selectride, Luche reduction; LiAlH ₄ , DIBAL-H; Trialkylsilanes, Meerwein-Pondorff-Verley reduction - Stereo/enantioselectiviey reductions -Chiral Boranes, Corey-Bakshi-Shibata.		
Unit-III	MODERN ORGANICSYNTHESIS:- Baylis-Hillman reaction, Henry reaction, Nef reaction, Ritter reaction, Sakura reaction and Tishchenko reaction. Tebbe olefination. Metal mediated C-C and C-2 coupling reactions: Heck, Stille, Suzuki, Negishi and Sonogashira, Nozaki-Hiyama Buchwald-Hartwig Ullmann coupling reactions, directed ortho metalation. Phase transfer catalysts, crown ethers, Solid state synthesis-Merrifield resin.Robbinson annulations, Nazarov cyclization-radical-olefin cyclization		
Unit-IV	 CONSTRUCTION OF RING SYSTEMS:- (a) Different approaches towards the synthesis of three, four, five, and six-memberrings. (b) Pauson-Khand reaction, Bergman cyclization; Nazarov cyclization, cation-olef cyclization and radical-olefin cyclization, inter-conversion of ring system (contraction and expansion). (c) Construction of macrocyclic rings and ring closing metathesis. 		
UNIT-V	RETROSYNTHESIS AND FUNCTIONAL GROUP PRO Basic principles and terminology of retro-synthesis, compounds, one group and two group C-X disconnections, C-C disconnections, amine and alkene synthesis, impo- synthesis, functional group transposition, important f conversions. Protection and deprotection of hydroxy, carboxyl, carbony alkene, 1.3 butadiene, alkyne. : chemo- and regioselective pro-	OTECTION: synthesis of one group a ortant strateg functional gr vl, carboxy an otection and	- of aromati nd two grou ies of retro oup inter mino groups

	deprotection. Systematic synthetic routes for jasmone, ascorbic acid, retinol.Asymmetric Synthesis- Basics, Classical reactions and stereochemistry involved in the synthesis.

Smith, M. B. strue	, & March, J. (2007). March's advanced organic chemistry: reactions, mechanisms, and cture. John Wiley & Sons		
Outcomes	The students will have advanced knowledge in:-		
	 Recognize the mechanism of oxidation and reduction reactions in organic 		
	synthesis.		
	Understand how systematic the advanced organic syntheses are carried out.		
	Recognize and distinguish the retro synthetic analysis.		
	 Construct target molecules through acceptable synthetic procedures. 		
	 Know about the importance and usefulness of protecting groups in organic synthesis. 		

Dr. M.Sundrarajan, Assistant Professor Dr. S. Umadevi, UGC Assistant Professor

		SEMESTER – III				
Course Code: SUBJECT: ADVANCED PHYSICAL Credits: 5 H		Hours: 90				
536303		CHEMISTRY				
Objectives	The of	jectives are to understand the advanced concepts of:-				
	► To	study the advanced Quantum Chemistry including th	e atomic orbit	tal's and		
	th	eir energies, and structure of many-electron atoms.				
	▷ To	> To study the molecular spectroscopy, this covers the Microwave spectroscopy,				
	Vi	Vibrational spectroscopy, Electronic spectroscopy and the Raman spectroscopy.				
	> To	To study the ion-solvent interactions and types of over potential.				
	➤ To	To study the crystallographic structure of colloids.				
Unit-I	ADVA	NCED QUANTUM CHEMISTRY :-				
	Struct	ture and spectra of hydrogenic atoms: Separatio	on of internal	motion and		
	radial	solutions.	1			
	Struct	Structure of many-electron atoms: Helium and Hydrogen atoms, hydrogen				
	field	atemicarbitala Slatar Tura Orbitala Slatar avaar	a minutes, S	ha poriadia		
	nronor	tion of elements. I CAO MO Hückel orbit	talar Down (ne periodic		
	approp	vimation Potential energy surface Hellman-Feynman	theorem	Sppennenner		
	Snecti	a of complex atoms: Quantum defects and ionizati	on limits spi	n-orbit		
	coupli	ngs and term symbols and selection rules.	on minus, spi	in oron		
Unit-II	MOL	ECULAR SPECTROSCOPY:-				
	Introd	uction to spectral energy domains and measurement of	spectra, Impl	ications of		
	discret	e energy levels, Population of States – Boltzman Distr	ibution, Intera	action of		
	radiati	on with matter, origin of line widths in molecular spec	tra, Transition	n dipole		
	mome	nt and Fermi's Golden Rule, Einsteins Coefficients, La	sers and Mase	ers;		
	Rotati	onal (Microwave) spectroscopy, Molecular vibrations	- Infrared spe	ctroscopy,		
	Norma	al mode analysis, Raman Scattering, Molecu	alar electror	nic spectra,		
	Photop	physical processes, Non-Linear Spectroscopy,	Nuclear	Quadrupolar		
	Resonance.					
Unit-III	ELEC	TROCHEMISTRY OF SOLUTIONS AND INTER	FACES:-			
	Electr	ochemistry of solutions: Ion-solvent interactions, i	on-ion intera	ctions, ionic		
	migrat	ion and diffusion. Theories of Double-Layer struct	ture, diffuse	-double-layer		
	theory	of Gouy and Chapman, the Stern Model, Adsorp	otion of ions	and neutral		
	compounds, Electrocaplillary and differential capacitance measurements; Influence			s; influence		
	of double layer on charge transfer processes.			e notentials		
	classif	ication of electrodes Reference electrodes: nolariz	vable and no	n-nolarizable		
	system	is Types of reference and working electrodes. Cu	rent-notential	relationship		
	(derivation of Butler-Volmer and Tafel equations) Types of overnotentials: origin			tials: origin		
	and minimization: mechanism. Origin of emf and classification of electrochemical			ochemical		
	cells.	, 8				
Unit-IV	MOL	ECULAR ENERGETICS AND DYNAMICS:-				
	Statist	ical view of entropy. Laws of thermodynamics from	n statistical c	onsiderations		
	Molec	ular view of temperature and heat capacity.	Boltzmann	distribution.		
	Therm	odynamic quantities in terms of partition functions	. Statistical r	nechanics of		
	simple	gases and solids. Equilibrium constant in terms of	partition fun	ctions. Bose-		
	Einste	in and Fermi-Dirac statistics. Overview of rate laws	and determin	ing rates and		
	orders	ot reactions. Complex Reactions. Catalysis. Tem	perature dep	endence and		
	Arrhei	nus law. Potential energy surfaces. Kinetic theory	of collisions	Transition		
	state t	heory. RRK and RRKM theories. Reaction cross-	sections, rate	coefficients,		
	reaction probabilities.					
UNIT-V		ROMOLECULAR CRYSTALLOGRAPHY:-		4 1		
	Basic	Diffraction Theory, Bragg's law, Miller Indices, Laue	Equations, Pro	biein and		
	INUCIEN	c acto Structure, A-ray major sources and production,	Aray detector	8,		

Crystallization techniques and principles, symmetry and space, Fourier transform, structure factor equation, phase and processing, methods of structure determination, heavy methods, patterson methods, Multiple Anomalous diffra diffraction, sulpur phasing, Isomorphous replacement, structure refinement and validation, structure deposition, of from structure, biological crystallography examples of virus, proteins, macromolecular assemblies.	space groups, reciprocal problem, data collection atom solutions like direct ction, Single Anomalous Molecular replacement, elucidation of mechanism ribosomes, membrane

Outcomes The students will have advanced knowledge in:-				
> Advanced concepts in quantum mechanics which make	the students to			
understand the atomic orbitals and their structures.				
>Advanced theoretical aspects of various spectroscopies.				

Dr. T. Stalin, Assistant Professor Dr. M. Muthumareeswaran, DST Inspire Faculty

SEMESTER – III						
Course SUBJECT: PHYSICAL CHEMISTRY Credits: 4						
Code:53630	4 PRACTICAL					
Objectives	The objectives are to understand the advanced concepts	of:-				
	> The physical chemistry practical course is design	ed such that to	provide deep			
	knowledge and hands on experimenting the more	advanced physic	cal chemistry			
	practicals such as kinetics, distribution studies, con molecular weight determination and construction of	practicals such as kinetics, distribution studies, conductometry, potentiometry,				
1.	Kinetics - Acid hydrolysis of ester.	phuse diagrams.				
2.	Kinetics - Acid hydrolysis of ester - Compari	on of strength	ns of acids /			
	determination of Ea.	U				
3.	Distribution Law - Study of iodine - Iodide equilibrium					
4.	Acid- Alkali titration by conductometry.					
5.	Determination of dissociation constants of weak acids b	conductometry.				
6.	Determination of Critical Micelle Concentration by con-	uctometry.				
7.	Potentiometric Titrations - Redox titration.					
8.	Determination of dissociation constant of weak acids by	Potentiometric T	itrations.			
9.	Determination of the activities by freezing point.					
10.	Determination of the dipole moments.					
11.	Determination of the quantum yields.					
12.	Distribution Law - Study of iodine – Iodide equilibrium.					
13.	Determination of the heats of vaporisation and depressions of freezing points of solutions.					
14.	Determination of the Electrodes with different substrates for H ₂ evolution.					
15.	Determination of the Photoelectrochemical solar cells.

Viswanathar	anathan, B. & Raghavan, P. S. (2015). Practical Physical Chemistry. ViVa Books.					
Outcomes	The students will have advanced knowledge in:-					
	 Carry out electrical experiments such as Conductor 	etric and Potenti	ometric			
	Titrations					
	Determine out the kinetic parameters in the ester hy	drolysis				
	 Understand the equilibrium reactions. 					

Dr. T. Stalin, Assistant Professor Dr. S. Viswanathan, Assistant Professor

SEMESTER – IV						
Course SUBJECT: COMPREHENSIVE CHEMISTRY Credits: 5				Hours:		
Code:53640	1			90		
Objectives	 The objectives are to understand the advanced concepts of:- Provide comprehensive knowledge about various topics in chemistry. Realize how the principles of chemistry are applied. Understand interlinking aspects of various topics in chemistry. Prepare the students to appear for competitive examinations. Inorganic Chemistry:- Chemical periodicity Structure and bonding in homo- and heteronuclear molecules, including shapes of molecules (VSEPR Theory). Concepts of acids and bases, Hard-Soft acid base concept, Non-aqueous solvents. Main group elements and their compounds: Allotropy, synthesis, structure and bonding, industrial importance of the compounds. Transition elements and coordination compounds: structure, bonding theories, spectral and magnetic properties, reaction mechanisms. Inner transition elements: spectral and magnetic properties, redox chemistry, analytical applications. Ourse provide a structure and structure and structure and structure.					
	7. O homo 8. Ca 9. A 10.B tr trans: 11. N tr 12.	rganometallic compounds: synthesis, bonding and structur Organometallics in ogeneous catalysis. ges and metal clusters. nalytical chemistry- separation, spectroscopic, electro- and nethods. ioinorganic chemistry: photosystems, porphyrins, metalloc ransport, electron- fer reactions; nitrogen fixation, metal complexes in medicin Characterisation of inorganic compounds by IR, I Mössbauer, UV-vis, NQR, MS, electron spectrosco echniques. Nuclear chemistry: nuclear reactions, fission and fusion, ra echniques and activation analysis.	e, and reactiv thermoanalyt enzymes, oxyg ee. Raman, NM opy and mi- dio-analytical	ity. tical gen R, EPR, croscopic		
	Phys 1. Ba s partice a orbita 2. Ap t secor 3. At princ 4. Cl H conju 5. C c	ical Chemistry:- asic principles of quantum mechanics: Postulates; operator olvable systems: ele-in-a-box, harmonic oscillator and the hydrogen atom, in- tomic als; orbital and spin angular momenta; tunneling. oproximate methods of quantum mechanics: Variational pr heory up to ad order in energy; applications. tomic structure and spectroscopy; term symbols; many-elec ntisymmetry iple. nemical bonding in diatomics; elementary concepts of MO fuckel theory for ugated π -electron systems. hemical applications of group theory; symmetry elements; haracter tables;	algebra; exact cluding shape: inciple; pertur etron systems and VB theor point groups;	tly s of bation and ries;		

selection rules.
6. Molecular spectroscopy: Rotational and vibrational spectra of diatomic
molecules; electronic
spectra; IR and Raman activities – selection rules; basic principles of magnetic
resonance.
/. Chemical inermodynamics: Laws, state and pain functions and their applications;
spontaneity and
spontaneny and pressure dependence of thermodynamic quantities: Le
Chatelier
principle: elementary description of phase transitions: phase equilibria and phase
rule:
thermodynamics of ideal and non-ideal gases, and solutions.
8. Statistical thermodynamics: Boltzmann distribution; kinetic theory of gases;
partition functions and their relation to thermodynamic quantities - calculations
for model systems.
9. Electrochemistry: Nernst equation, redox systems, electrochemical cells; Debye-
Huckel theory; electrolytic conductance - Kohlrausch's law and its applications;
ionic equilibria; conductometric and potentiometric titrations.
10. Chemical kinetics: Empirical rate laws and temperature dependence; complex
reactions; steady state approximation; determination of reaction mechanisms;
collision and transition state theories of rate constants; unimolecular reactions;
enzyme kinetics; salt effects; homogeneous catalysis; photochemical reactions.
11. Colloids and surfaces: Stability and properties of colloids; isotherms and surface
12 Solid state: Crystal structures: Bragg's law and applications: hand structure of
solide
13 Polymer chemistry: Molar masses: kinetics of polymerization
14. Data analysis: Mean and standard deviation: absolute and relative errors; linear
regression; covariance and correlation coefficient.
Organic Chemistry:-
1. IUPAC nomenclature of organic molecules including regio- and stereoisomers.
2. Principles of stereochemistry: Configurational and conformational isomerism in
acyclic and
cyclic compounds; stereogenicity, stereoselectivity, enantioselectivity,
diastereoselectivity and
asymmetric induction.
3. Aromaticity: Benzenoid and non-benzenoid compounds – generation and
reactions.
4. Organic reactive intermediates: Generation, stability and reactivity of
free redicals, carbonas, banzunas and nitranas
5 Organic reaction mechanisms involving addition elimination and substitution
reactions with
electrophilic, nucleophilic or radical species. Determination of reaction pathways.
6. Common named reactions and rearrangements – applications in organic synthesis.
7. Organic transformations and reagents: Functional group interconversion
including oxidations
and reductions; common catalysts and reagents (organic, inorganic, organometallic
and
enzymatic). Chemo, regio and stereoselective transformations.
8. Concepts in organic synthesis: Retrosynthesis, disconnection, synthons, linear
8. Concepts in organic synthesis: Retrosynthesis, disconnection, synthons, linear and convergent
 Concepts in organic synthesis: Retrosynthesis, disconnection, synthons, linear and convergent synthesis, umpolung of reactivity and protecting groups.

Outcomes

Dr. G. Paruthimal Kalaignan, Senior Professor

- Dr. S. Thambidurai, Professor
- Dr. M. Sundrarajan, Assi. Professor
- Dr. T. Stalin, Assi. Professor
- Dr. G. Gopu, Assi. Professor

- Dr. S. Viswanathan, Assi. Professor
- Dr. S. Umadevi, Assi. Professor
- Dr. P. Muthu mareeswaran, Inspire Faculty
- Dr. N. Sengottuvelan, Assi. Professor

SEMESTER – IV						
Course	SUBJECT: ANALYTICAL CHEMISTRY	Credits: 4	Hours: 144			
Code:536402	PRACTICAL					
Objectives	The major objectives of this course are to understand the	e concepts of:	_			
	Develop practical skill with reference to quantitative	ve estimation a	ind semi-			
	microqualitative analysis.					
1	Have expertise in the mixture of inorganic salt sep	parations.				
1.	Quantitative estimations:-					
	 Phenol 					
	 Ethylmethylketone 					
	> Nitrobenzene					
	➢ Glucose					
2.	Semi-microqualitative analysis:-					
	Analysis of mixtures containing two ions:					
	 Less familiar cations: Ce, W, Mo, Zr, 11, V, and L1. Familiar cations: Ph. Cu. Bi. Cd. Mn. Ni. Co. Zn. Ca. Ba. Sr and Mg. 					
DEEEDENC	Familiar cations : Pb, Cu, Bi, Cd, Min, Ni, Co,	Zn, Ca, Ba, S	r and Mg.			
REFERENC.	(2008) Laboratory Manual of Organia Chamistry (2 rd ad)	Now Ago Int	ornational			
Dansai, K. K.	(2008). Laboratory Manual of Granic Chemistry (5 ed.)	. New Age III	emanonai.			
Ekeley, J. B. (1912). A Laboratory Manual of Inorganic Chemistry. J. w	ney.				
Ramanujam,	V. V. (1971). Inorganic Semimicro Qualitative analysis. N	ational Publish	ing Co.			
Svehla, G. (20	Svehla, G. (2008). Vogel's Qualitative Inorganic Analysis, 7/e. Pearson Education India					
Veeraswamy, R., Kulandaivelu, A., Venkateswaran, V., Sultan (2012). <i>Basic Principles of</i> <i>Practical Chemistry</i> (2 nd ed.). Chand & Sons.						
Outcomes	The student would have through practical knowledge in th	e:-				
	Determination of the strength of given unknown	solution from e	estimation.			
	To identify the familiar and less familiar cations f	orm the given	inorganic			
	mixture of salts.	C				

Dr. G. Gopu, Assistant Professor Dr. S. Umadevi, UGC Assistant Professor

	SEMESTER – IV				
Course		SUBJECT: PROJECT WORK & VIVA-	Credits: 6	Hours: 216	
Code:53640	3	VOCE			
Objectives	The ma	ajor objectives of this course are to understand the cor	ncepts of:-		
	The m	nain objective of this project work is exchange of	experiences	in promoting	
	Chemi	stry as a science of the future, as well as stimul	ating and en	couraging the	
	studen	ts to find new, innovative, modern and interactive fi	ndings in Che	emistry.	
	Concre	ete objectives of the course are to:			
	≽ En	courage thestudents to have research experience in the	he subjects tau	ıght or	
	dis	scussed in the classroom.			
	Make students aware of how to handle with instruments in the laborate			ories and	
	the safety or dangers in the laboratories.				
	🕨 Ma	ake students aware of the importance of using/handlir	ng safe, toxic a	and	
	ca	rcinogenic chemicals.			
	> Pr	omote awareness of the basic and advanced researche	es in chemica	sciences.	
	► Ex	pose the students to the present trends in chemical sci	ience research	and	
	act	tivities.			
Outcomes	The stu	udent would have through practical knowledge in the:	-		
	➤ Ur	nderstand the how the chemical reactions taught and c	liscussed in th	ne	
	cla	assroom are carried out in the laboratories.			
	Carry out research in the field of chemical sciences.				
	Understand how to handle the instruments and equipments in the laboratories.			oratories.	
	Have practical knowledge about the precautions and safety measures in the			in the	
	lał	poratories.			
	🕨 Go	o for higher studies in research.			

ELECTIVE COURSES					
Course		SUBJECT:INSTUMENTAL METHODS OF	Credits: 5	Hours: 90	
Code:53605	1	ANALYSIS			
Objectives	The objectives are to understand the advanced concepts of:-				
	To acquire the knowledge in fundamental aspects, instrumentation and applications				
	of				
	 Separation techniques. Thermal and an extreme tria to a humine to a second second				
	 Flectroanalytical methods 				
Unit-I	SEPAI	RATION TECHNIOUES:-			
	Theory	of chromatography, mechanism-adsorption and partiti	on-classificat	ion- column,	
	paper a	nd thin layer chromatography -Gas Chromatography	/ (GC) –GC/	MS, LC/MS-	
	High P	erformance Liquid Chromatography (HPLC)–Ultra-per	rformance		
	liquid	chromatography (UPLC)-Size Exclusion Chromatog	graphy (SEC))- Ion	
	Exchar	ge Chromatography-Supercritical fluid chromatograph	y-Application	18.	
Unit-II	ERRO	R ANALYSIS ANDSPECTROSCOPIC TECHNIQ	UES:-		
	Statisti	cs for analytical experimentation: Probability, Regre	ession analys	is, Accuracy	
	instrum	population of errors, data analysis and signal	rophotometer	Circular	
	Dichro	ism (CD) and Optical Rotatory Dispersion (ORD) In	frared spectro	ometer	
	Raman	spectroscopy. Nuclear Magnetic Resonance Spectro	oscopy. Mole	cular Mass	
	spectro	metry-Hyphenated Mass Spectral methods.	F <i>J</i> ,		
Unit-III	SPEC	FROMETRIC TECHNIQUES:-			
	Principles and applications of Atomic Absorption Spectrometry (AAS), Atomic				
	Fluorescence Spectrometry, Atomic Emission Spectrometry (AES)-				
	Spectrofluorimetry, Turbidimetry - Flame photometry-Atomic Mass spectrometry.				
Unit-IV	IHERMAL AND SURFACE ANALYSIS:- Principles and applications of Thermogravimatry(TC) Differential Thermal				
	Analys	Analysis(DTA) - Differential Scanning Calorimetry (DSC)- Thermo Mechanical			
	Analysis (TMA) –				
	BET Surface Area Analyzer - X-ray diffractometer (XRD)-X-ray photo electron				
	spectroscopy (XPS)-Scanning Electron Microscopy (SEM) -Transmission Electron				
	Micros	copy (TEM) - Atomic Force Microscopy (AFM).			
UNIT-V	ELEC	FROANALYTICAL METHODS:-			
	Electro	analytical techniques: Applications to chemical	& biological	systems:	
	Princip	les of Potentiometry, Electrogravimetry, Voltamm	etry, Strippin	ng methods,	
	Electro	amperometry, Quantitative applications of Potentio	metry and v	oltammetry:	
	Microh	alance		ystai

anai	ysis.					
Outcomes	The students will have advanced knowledge in:-					
	> Gain knowledge regarding the separation techniques using various					
	chromatography.					
	> Improve their analytical skill to use thermometric and spectrometric techniques.					
	> Get deep knowledge in fundamental aspects of electroanalytical techniques and					
	sensors.					

Dr. S. Umadevi, UGC Assistant Professor Dr. G. Gopu Assistant Professor

ELECTIVE COURSES					
Course		SUBJECT:NATURAL PRODUCTS AND	Credits: 4	Hours: 90	
Code:53605	2	INTRODUCTORY BIOCHEMISTRY			
Objectives	The ob	jectives are to understand the advanced concepts of:-	I		
Ŭ	> To know the fundamentals of natural products and biochemistry of living things.				
	► To	> To promote understanding of the significance of natural products in terms of			
	the	eir biosynthesis, biological activity and chemical syn	thesis, combi	ning organic	
	chemistry and biological chemistry.				
Unit-I	HETE	ROCYCLIC COMPOUNDS:-			
	Heter	ocyclic compounds:Synthesis and reactivity of	f common	heterocyclic	
	compo	unds containing one or two heteroatoms; Synthe	sis and pr	operties of	
	1midaz	cole, oxazole, thiazole and indole, Anthocyanidins, C	yanıdın Chlor	ide,	
X X •4 XX	flavon	es and isoflavones, pyrimidines, purines, uric acid and	caffeine.		
Unit-II	SIER	UIDS, URD AND CD:- day Tymaa of stanoida stanostyna stanoschamistary a	fahalastaral	Stan at 1	
	facture	us: Types of steroids – structure, stereochemistry o	or cholesterol	- Structural	
	ostradi	al progesterone. Structure of ergesterol	iosterone, est	ione, estiloi,	
		and CD : Circular bireferegence, ontical rotary dispersi	on circular di	chroism	
	- Cot	ton effect curves – octant rule –axial haloketone	rule - Appl	ications of	
	chiron	tical properties in configurational assignments	ruie - Appi	ieations of	
Unit-III	ALKA	LOIDS AND TERPENOIDS:-			
	Alkalo	ids: General methods of structure elucidation of	alkaloids - s	tructure and	
	stereod	hemistry of the following alkaloids - Quinine, Mor	ohine and Ly	sergic acid -	
	Biosyr	thesis of alkaloids.	•	C	
	Terpenoids: Classification - Structure, stereochemistry of Camphor, Zingiberene				
	and Al	pietic acid - Biosynthesis of terpenoids.			
Unit-IV	ANTIBIOTICSANDVITAMINS:-				
	Antibiotics: A detailed study of structureand stereochemistry of penicillin,				
	cephalosporin and griseofulvin- structural features of streptomycin.				
	Vitam	ins : Chemistry and physiological action of ascorbic activity and physiological activity and physiological action of ascorbic activity and physiological activity activ	d, thiamin, rit	ooflavin	
	and py	HEMLETDY	12.		
UNII-V	Struct	HEMISIRY:-	fication of c	rbobydrates	
	lipids	amino acids proteins and nucleic acids. Flow of g	enetic inform	ation nature	
	of gen	etic code, replication of DNA, transcription and trans	slation, regula	ation of gene	
	expres	sion.	,8		
	Metab	olism: Bioenergetics, thermodynamic consideration	tions, redox	potentials,	
	bioene	rgetic principles. Catabolism and anabolism; Enzymes	involved, cata	alytic	
	mecha	nism and regulatory steps in glycolysis, TCA cycle,	mitochondria	al electron	
	transpo	ort and oxidative phosphorylation.

Priv	ate Limited.				
Outcomes	The students will have advanced knowledge in:-				
	> To understand the role of natural products in living organisms, their				
	biosynthesis and will have a greater understanding of organic synthesis with				
	natural product targets.				
> To solve by knowing natural sources and their chemical and biochemical					
	reactions.				

Dr.M. Sundrarajan, Assistant Professor Dr. S. Viswanathan, Assistant Professor

		ELECTIVE COURSES		
Course Cod	e:	SUBJECT: SPECTROSCOPIC METHODS	Credits: 5	Hours: 90
536053		OF ANALYSIS		
Objectives	The p	primary objective of this course is to introduce the	student to t	he advanced
	concepts of applications of spectroscopy in organic and inorganic chemistry. The			
	object	objectives are:		
	➢ To learn about the basic principles and applications of UV-VIS, FT IR and			
	R	aman spectroscopic techniques.		
	► T	o be familiar with the principles and applications of NM	IR, Mass and	
		lossbauer spectroscopies.		
		o be able to interpret the spectra and work out conjoine	d problems in	
TT. 14 T	SI LINZ N	US ID AND DAMAN SDECTROSCODY		
Unit-I		IS, IR AND RAMAN SPECTRUSCUPY:-	anniugated a	and aromatic
	UV-V	ns electronic excitations factors that affect the p	-conjugated a	intensity of
	absor	nion bands-Beer's Jambert's law- Woodward -Fig	sher rules fo	r spectra of
	dienes	α β -unsaturated ketones and aromatic carbonyl con	nounds ch	arge transfer
	comp	lexes.	iipounus en	uige transfer
	IR S	nectroscopy: Predicting number of active modes	of vibrations-	Hook's law-
	Chara	cteristic group frequencies of organic and inorgani	c compounds	- Effects of
	substi	tution, conjugation, bond angle and hydrogen bond	l on carbony	l vibrational
	freque	encies- IR spectra of metal complexes-		
	Rama	In Spectroscopy: Raman spectra of simple organic and	inorganic mo	lecules-
	resona	ance and surface enhanced resonance Raman scattering.		
Unit-II	NMR	SPECTROSCOPY:-		
	NMR	Spectroscopy: NMR Phenomenon – NMR spe	ctroscopy of	compounds
	contai	ning spin ¹ / ₂ nuclei (¹ H, ¹³ C, ³¹ P, ¹⁹ F, Al, B, Si) - che	mical shift (δ	$) -^{1}H$ NMR-
	induct	inductive and anisotropic effects on δ - spin –spin coupling and coupling constant, J		
	– ger	ninal, vicinal and long range coupling-factors that	affect these	parameters,
	Karpl	us equation	1 00	
		AR Broad-band and off-resonance decoupling and gam	ma gauche eff	ect - Nuclear
	Overn	auser Effect - Applications of NMR in inorganic and or	ganometallic (chemistry
	Simpl	ilication of complex NMR spectra – shift reage	nts-double re	esonance -
	ueute	num exchange reactions – nigh neids.		
Unit-III	TWO	DIMENSIONAL NMR AND FPR SPECTROSCO	PV	
	Two	dimensional NMR: COSY (H-H, C-H), INADEOU	ATE. HMBC	. DEPT and
	NOES	SY	,	,
	EPR	Spectroscopy: Zeeman splitting, introduction to zer	o-field splittin	ng, g-values,
	anisot	ropy in g-values, hyperfine and super hyperfine cou	oling constant	ts, - selected
	applic	ations in organic inorganic compoundsCu, Mn and V c	omplexes, EP	R of
	comp	lexes having spin> $1/2$.		
Unit-IV	MAS	S AND MOSSBAUER SPECTROSCOPY:-		
	Mass	Spectroscopy: molecular ion, isotope abundance, fi	ragmentation	processes of
	organic molecules, McLafferty Rearrangement-deduction of structure through mass			hrough mass
	spectral tragmentation, high resolution MS, soft ionization methods, ESI-MS and			
	MALDI-MS, studies of inorganic/coordination and organometallic representative			
	comp	bunds. Hypnated techniques	aion and -1-	mation
	hyper	UNDER SPECIFUSCUPY - MOSSDAUER EFFECT, RECOILLESS EMIS	ine and quadr	ipuon,
	intera	ction and interpretation of spectra -Fe. Sn	ine and quadr	upic
LINIT V	SPEC	TROSCOPIC LABORATORV.		
01111-1	Use o	f spectroscopic instrumentation to obtain familiarity with	h important ty	pes of

spectrometers and spectroscopic method spectrometers include electron ultraviolet/visible absorption, fluorescence, Raman, Fourier transform infrared and nuclear magnetic resonance, Mass and EPR spectroscopic techniques.	ic

Sustai	Sustainability. Wiley.				
Outcomes	The students will have advanced knowledge in:-				
	Understand and identify the pollution problems.				
	> Efficient knowledge in the chemical toxicity and causes of environment.				
	> Understand the green chemistry principles.				
	 Create a valuable design and synthesis of compounds by greener methods. 				

Dr. M. Sundrarajan, Assistant Professor Dr. S. Viswanathan, Assistant Professor

ELECTIVE COURSES						
Course		SUBJECT:MATERIALS CHEMISTRY	Credits: 4	Hours: 72		
Code:53605	5					
Objectives	The co	urse content has been structured to help the student to a	chieve the fol	llowing		
Ū	objecti	ves The objectives of this course are:		-		
	≽ To	> To discuss important contemporary topics in the field of materials chemistry				
	≽ To	educate chemistry students about changes in energy le	evel and prope	erties of		
	crystals in the transition from molecular bonds to crystal bonding;					
	> To understand the physical and chemical synthesis of semiconductor					
	na:	nanocrystals;				
	> 10	understand the role of chemistry in materialssynthesis	S;			
	\sim 10	acquire advanced knowledge about semiconductor an possess basic concentual skills to understand new ma	ddielectrics;	nlications		
IInit I	STDU	CTUDE OF COVETALS.	actials and ap	prications.		
Unit-1	Amorr	hous vs crystalline solids types of bonding in soli	ids – Unit ce	ell – Crystal		
	lattices	a – Crystal imperfections – Phase transformation	diagrams	- Physical		
	proper	ties of crystals – Classification of solids based on zone	theory – Ener	gy bands		
	in solic	ls – Band theory – Classification of solids based on bar	nd theory.	8,		
Unit-II	SUPE	RCONDUCTORS AND SEMICONDUCTORS:-	2			
	Introdu	action - Properties and types of superconductors - High	temperature			
	superco	onductors - Applications of superconductors. Semicond	ducting materi	ials -		
	Proper	ties of semiconductors - Determination of band gap and	d types of			
	semico	nductors - Various applications of semiconducting mat	erials.			
Unit-III	DIELECTRIC /INSULATING MATERIALS:-					
	Introduction - Physical, chemical and electrical properties - Classification – Testing					
	of insulating materials – important applications of insulators. Ferroelectric materials					
	ferroelectric materials.					
Unit_IV	MAG	NETIC MATERIALS -				
Onit-1 v	Introdu	action – Types of magnetic materials –Diamagnetism –	Paramagnetis	m –		
	Ferromagnetism – anti-ferromagnetism – Magnetic hysteresis – Soft and hard magnetic					
	materials – Ferrimagnetic materials (or) Ferrites – Applications of ferrites.					
UNIT-V	PREP	ARATIVE METHODS:-				
	Introdu	action - Solid state thermal reaction method, sol-	gel method,	combustion		
	method	d, hydrothermal method and microwave heating method	nod physica	al methods –		
	vacuur	n evaporation, sputtering, pulsed laser deposition, mol	ecular beam	epitoxy		
	method	ds. Chemical methods – chemical vapour deposition	n, chemical s	olution		
DEFEDENZ		non, electrochemical deposition, spray pyrolysis.

Dr. N. Sengottuvelan, Assistant Professor Dr. M. Muthumareeswaran, DST Inspire Faculty

ELECTIVE COURSES				
Course Code	e:536056 SUBJECT:POLYMER CHEMISTRY Credits:4 Hours: 72			
Objectives	The objectives of the course are to acquire basic knowledge in area of:-			
_	Fundamental concepts of polymer chemistry.			
	Polymerization reactions.			
	Polymerization techniques.			
	Structure and properties of polymers.			
	 Characterization of polymers. 			
Unit-I	BASIC CONCEPTS OF POLYMER CHEMISTRY:-			
	Definition, nomenclature of polymers, functionality of monomers, degree of			
	polymerization. Types of polymerization: addition, condensation and			
	copolymerization. Mechanism and kinetics of free radical, cationic and anionic			
	polymerization. Copolymerization: free radical, ionic. Copolycondensation.			
Unit-II	POLYMERIZATION REACTIONS:-			
	Principles of polymer reactivity: Photolytic, photosensitized polymerization.			
	Cyclo, electro-initiated, cross-linking, graft and block copolymerization. Polymer			
	Steneochemistry of Delymerization			
	Surfecture Surface States and Sta			
	nolymers. Stereospecific polymerization. Ziegler-Natta polymerization			
Unit III	POLVMEDIZATION TECHNIQUES:			
0111-111	Various methods of polymerization: solution bulk emulsion and suspension			
	Electropolymerisation. Comparative accounts. Recycling of polymers.			
	Sneciality Polymers			
	Fire retardant polymers, thermally stable polymers, biodegradable polymers,			
	conducting polymers, polymer electrolytes and liquid crystalline polymers.			
Unit-IV	CRYSTAL STRUCTURE AND PROPERTIES OF POLYMERS:-			
	Polymer crystallization, factors affecting crystallisability. Morphology of			
	crystalline polymers, effect of crystallisability on the properties of polymers. Glass			
	transition temperature (T_g) and its determination. Dependence of T_g on polymer			
	structure. Melting temperature. Physical and mechanical properties of crystalline			
	and amorphous polymers.			
UNIT-V	CHARACTERIZATION OF POLYMERS:-			
	Number average, weight average and viscosity average molecular weight of			
	polymers. Molecular weight determination by light scattering, osmotic, centrifuge			
	and viscosity methods. Gel permeation chromatography. Analysis and testing of			
DEEEDENG	polymer by F1-IR, NMR, ARD, IGA/D1A/DSC.			
REFERENC	LES AND IEXIBOURS:- (S. (2004) A Textbook of Polymers, Vol I. S. Chand & Company Itd			
Dilatilagai, IV	1. S. (2004). A Textbook of Tolymers. Vol 1. S. Chand & Company Ed.			
Bill Meyer. (1994). A Text Book of Polymer Chemistry, Singapore: John Wiley & Sons.			
Carraner, E.C.	Viewengthen (1086). Deliver Science Wiley Eastern			
Gowalikel &	(1902) D. L. Classica N. D. H. Will E. (1911)			
Mishra, S. P.	(1993). Polymer Chemistry. New Delni: Wiley Eastern Ltd.			
Outcomes	I he students will have advanced knowledge in:-			
	Acquire the knowledge about nomenciature of polymer, degree, types, machanism and kingtics of polymerization			
	Linderstand the principles of polymer reactivity and stareochemistry of			
	nolvmerization			
	 Get deep knowledge about various methods of polymerization and speciality 			
	polymers			
	know the polymer crystallization, glass transition temperature and Physical and			
	mechanical properties of crystalline and amorphous polymers			

 Improve their analytical skill to analysis and testing of polymer by FT XRD, TGA/DTA/DSC. 	ſ-IR, NMR,
---	------------

Dr. M. Muthumareeswaran, DST Inspire Faculty Dr. G. Gopu, Assistant Professor

ELECTIVE COURSES							
Course		SUBJECT:SUPRAMOLECULAR	Credits:4	Hours:			
Code:53605	7	CHEMISTRY		72			
Objectives	The obje	ctives of the course are to acquire basic knowledge i	n area of:-				
-	🍃 🔺 To	explain the various aspects of supramolecular chemis	stry.				
	🎽 ≻ To	explore about the weak interactions between the host	and guest				
	> To	explore the interactions between self-assembled syste	ems.				
	► To	explore about the applications supramolecules in vari	ous fields.				
Unit-I	SUPRA	MOLECULES:-	1 0				
	Introduction to supramolecules: crowns, cryptands, spherands. Supramolecular						
	Chemistry: key-lock principle and induced fit. Molecular Recognition: concept,						
	affacts of	locterios, cooperativity, multivalency	-assembly, te	implate			
	Supram	alocular Interactions: Ion ion interactions: Ion dinol	a interactions	· dinale			
	dipole in	teractions: hydrogen bonding and supramolecular syn	thons haloge	, uipoie-			
	bonding	cation- π -interactions: π - π -interactions: van der Waal	s interactions				
	hvdroph	bic effect: metal-coordination bonds.	s interactions	,			
Unit-II	Host-Gu	est concepts:-					
	Host-Gu	est: Calixarenes as receptors and molecular scaffolds.	. Hydrogen bo	onding			
	anion ree	ceptor system (amidopyrroles and calixpyrroles). Ion p	pair receptors	(cascade			
	complex	es, ditopic receptors and zwitterionic receptors). Hosts	s for Cation E	Binding;			
	Host for	Anion Binding; Hosts for the Binding of Neutral Gue	sts; Synthetic				
	consider	ation.					
Unit-III	TEMPL	TEMPLATES AND ASSEMBLIES:-					
	Templat	es: Programmed Supramolecular Systems; Kinetic and	d Thermodyn	amic			
	Considerations; Self-assembled closed shell compounds; Helicates						
	Assemblies. Introduction, Supramolecular Aggregates and Assemblies. Types of						
	of characterizing of aggregate formation.						
Unit IV	FUNCT	IONAL MOLECULES AND DEVICES					
Unit-1V	Example	s of molecular-scale machines including brakes gear	s nlugs and s	sockets			
	shuttles switches syringes and motors Logic gates artificial photosynthesis						
	Discrete molecular electrochemical and optical systems.						
UNIT-V	CONTR	OL OF REACTIVITYAND SENSITIZERS:-					
	Aggrega	tes structure, micelles, vesicles (reaction and transport	t), DNA and o	lrug			
	delivery	functionalized surfactants, mixed micelles, cyclodextr	ins.				
	Metal co	mplex sensitizers: Electron relay, semiconductor sup	ported metal	oxide			
	systems,	water-photolysis, nitrogen fixation and CO ₂ reduction	1.

Libr	ary.
Outcomes	The students will have advanced knowledge in:-
	Control the self-assembly of the molecules.
	> Make a drug carrier cargo vehicle system usingsupramolecules.
	> Design the sensor systems using host-guest strategy.
	> Design supramolecular storage systems which can be utilized in various fields.

Dr. S. Viswanathan, Assistant Professor Dr. M. Muthumareeswaran, DST Inspire Faculty

ELECTIVE COURSES						
Course Code	:536058	SUBJECT:MEDICINAL CHEMIS	TRY	Credits:4	Hours:	
					72	
Objectives	The obje	ctives of the course are to acquire basic	knowledg	e in area of:-		
-	> To educate on the basic terminologies of the drugs and mechanism of drug					
	acti	on.				
	> To	develop knowledge about inorganic and	l organic	pharmaceutica	ls.	
		create awareness regarding the causes a	and contro	of of life-threate	ening	
		ases such as AIDS.	the imper	tant madiainal		
		fucts and their manufacturing principle	s mipor	tant medicinai		
Unit-I	BASICS	:-				
Cint I	Important terminologies in the study of drugs – pharmacy, pharmacology					
	medicinal chemistry, pharmakinetics, LD ₅₀ , ED ₅₀ etc; Classification of drugs –					
	Biologic	al and chemical classification; Mechanis	sm of drug	g action; Thera	peutic	
	Index – t	heir use in selecting drugs ; Assay of dr	ugs.			
Unit-II	INORG	ANIC PHARMACEUTICALS:-	1 • 1	1.		
	Electroly	tes – extracellular and intracellular; Rep	Sodium	- sodium, potas	ssium	
	and calci	um regulators: Acidifiers – HCl and am	souluii, j nonium cl	potassium and bloride: Antaci	de _	
	Sodium	notassium and magnesium antacids: Ad	sorbents.	Pharmaceutica	us – 1 Aids	
	– Suspen	ding agents, colorants, antidotes; Topic	al agents -	- Astringents, s	ilicone	
	polymers	; Miscellaneous Aids – Antidepressants	s – Plaster	of paris, Antitl	nyroid	
	agents –	potassium perchlorate.		-	-	
Unit-III	ORGAN	IC PHARMACEUTICALS:-				
	Preservatives, antioxidants and sequestrants, emulsifying agents, colouring					
	avouring and sweetening agents, stabilizing and suspending agents, ointment bases, solvents and miscellaneous substantes: Diagnostic agents – drugs used as					
	X-ray contrast media, drugs used to test organ function: Rh factors – blood					
	pressure high, normal and low, Antianaemic drugs: Coagulanta and					
	anticoag	ilants; Causes and Control of AIDS.	59, 00 u gu	iuntu unu		
Unit-IV	MANUF	ACTURING PRINCIPLES				
	Compres	sed tablets, wet granulation, dry granula	ation or slu	ugging; Direct		
	compress	sion, tablet presses formulation; Coating	g pills, cap	sules sustained	action	
	dosage fo	orms, parential solutions, oral liquids, in	jections;C	Dintments; Stan	dard of	
	hygiene a	and manufacturing practice.				
UNIT-V	PHARM	ACEUTICAL AND MEDICINAL P	RODUCT	[S:-		
	Antibioti	cs – Assay and structures of penicillin;	Sulpha dr	ugs – Preparati	on, ving Fot	
	soluble V	Vitamin A and K Water soluble Vitamir	\mathbf{R} group	and C. Analge	sic	
	– Morph	ne and Paracetamol: Anaesthetics – Ch	emistry of	f anaesthetic et	her and	
	cocaine;	Alkaloids – Isolation, colour reaction at	nd SAR of	f quinine,		
	Tranquil	zers and sedatives; Antineoplastic agen	ts (cancer	drugs) – Alkyl	ating	
	and antin	netabolites; Diabetes – Insulin.		· · ·	-

Outcomes	The students will have advanced knowledge in:-				
	 Acquire basic knowledge about drugs, classification of drugs and 				
	mechanism of their action.				
	 Get details about inorganic and organic pharmaceuticals. 				
	➢ Have awareness about the various medicinal products available for many				
	diseases and critical conditions.				
	> Be able to apply the knowledge of fundamental concepts and principles of				
	drug design, synthesis and manufacture in pharmaceutical industry.				

Dr. M. Sundrarajan, Assistant Professor Dr. S. Viswanathan, Assistant Professor

	ELECTIVE COURSES						
Course		SUBJECT:CHEMICAL AND	Credits:4	Hours: 72			
Code:53605	59	ELECTROCHEMICAL ENERGY SYSTEMS					
Objectives	The obj	ectives of the course are to acquire basic knowledge in area of	f:-				
	▶ Thi	s course presents the basic principles and theory of Chemical	l and				
	Ele	ctrochemical energy systems like Nuclear Energy, Electrochem	mical energy,	Hydrogen			
	ene	rgy and Solar energy.					
Unit-I	ENER	GY AND ENVIRONMENT :-		4-			
	Availab	te energy options, their advantages and disadvantages. Enviro	nmental effec	its,			
	Eossil fi	uses: netroleum natural gas and coal - Origin processing and	production of	value added			
	product	s - available current conversion technologies.	production of	value added			
Unit-II	NUCLI	CAR ENERGY:-					
	Nuclear	Energy: Principles of Fission - Fission reactors, U enrich	ment and pro	ocessing of spent			
	fuels. N	luclear reactor kinetics and control - nuclear fusion - mag	netic and oth	er confinement -			
	evaluati	on of the option of nuclear energy.					
	Nuclear	power in India.					
Unit-III	ELECI	ROCHEMICALENERGY: -	af the array of the second	antia and			
	kinetic (considerations	or mermodyna				
	Primary	cells - various types, especially magnesium and aluminium b	ased cells - m	agnesium			
	reserve	batteries.		6			
	Seconda	rry cells: classification based on electrolyte type, temperature	of operation of	on the basis of			
	electrod	es - chemistry of the main secondary batteries -					
	Batterie	s for electric vehicles - present status.					
Unit-IV	FUEL	FUEL CELLS AND HYDROGEN FUEL:-					
	Fuel cells - classification - chemistry of fuel cells - detailed description of hydrogen/oxygen						
	tuel cells - methanol - molten carbonate solid polymer electrolyte and biochemical fuel cells.						
	nyurogen as a ruer - production (inermal, electrolysis, photolysis and photoelectrochemical) storage and applications of hydrogen storage						
	photoen	encenenien) storage and apprearions of nyarogen storage.					
UNIT-V	SOLAF	R ENERGY:-					
	Solar en	ergy conversion devices - photovoltaic cells - photoelectroche	emical				
	cells - s	emiconductor electrolyte junctions photocatalytic modes for f	uel conversion	n process -			
DEFEDEN	photobi	ochemical options.					
Appleby S		DIEAIBOOKS:- ulkas E. K. (1980) Eval call Hand Book, Von Nostrand Bo	inhold Gratz	$\sim 1 M (1083)$

	NON MAJOR ELECTIVE COURSES				
Course	SUBJECT: FUNDAMENTAL ASPECTS IN	Credits:	Hours:		
Code:536071	MATERIALS CHEMISTRY	2	54		
Objectives	The objectives of the course are to acquire basic knowledge in a	area of:-			
	> To discuss the basic concepts which are important contem	porary topic	s in the		
	To educate non-chemistry students about changes in energy	w level and	nronerties		
	of crystals in the transition from molecular bonds to cryst	al bonding:	properties		
	> To understand the basics of physical and chemical synthe	esis of semico	onductor		
	nanocrystals				
Unit-I	Crystal Structure		~ .		
	Amorphous vs crystalline solids, types of bonding in solids – I	he Unit cell	– Crystal		
	solids based on zone theory – Energy bands in solids – Band the	s – Classifica eory – Classi	fication of		
	solids based on band theory.	cory classi			
Unit-II	Superconductors and Semiconductors				
	Introduction – Properties and types of superconductors	s - High to	emperature		
	superconductors – Applications of superconductors.	_			
	Semiconducting materials - Properties of semiconductor	rs – Determ	ination of		
	band gap and types of semiconductors.				
Unit-III	Dielectric / Insulating Materials				
	Introduction - physical, chemical and electrical properties - Clar	ssification –	Important		
	applications of insulators.				
	Ferroelectric materials – Classification of ferroelectric materials	s – Applicati	ons of		
Unit IV	terroelectric materials.				
Unit-1 v	Introduction – Types of magnetic materials – Diamagnetism – P	aramagnetisr	n –		
	Ferromagnetism – anti-ferromagnetism – Soft and hard magnet	etic materials			
UNIT-V	Prenarative Methods of Bulk Crystalline Powders and Mat	erials			
	Characterization Techniques				
	Introduction - Solid state thermal reaction method, sol-gel method, combustion				
	method, hydrothermal method and microwave heating method. Physical				
	characterization techniques: XRD, XPS, FT-IR and	Laser Ra	man		
	Thermal analysis: TG/DTA and DSC	SEIVI.

Outcomes	The students will have advanced knowledge in:-	, 1 · 1	• .1		
	I he course content has been structured to help the fundamental language in characteristic structured to help the	student ach	leve the		
	their structure	s of materia	is and		
	 It facilitates the students to understand the princip. 	les of semic	onductors		
	and superconductors		onductors		
	> It makes the students to know about the magnetic	materials			

NON MAJOR ELECTIVE COURSES					
Course		SUBJECT:BASIC CONCEPTS IN POLYMER	Credits:	Hours:	
Code:536072		CHEMISTRY	2	54	
Objectives	The obj	ectives of the course are to acquire basic knowledge in	area of:-		
	> Fun	damental concepts of polymer chemistry			
	Polymerization reactions				
T T •4 T	> Pol	ymerization techniques			
Unit-I	Introdu Definiti	Iction:- on Nomenclature of polymers. Functionality of mono	mars Degra	e of	
	polyme	ization. Types of polymerization – addition, condensat	ion and	<i>c</i> 01	
	copolyn	nerization. Mechanism of free radical, cationic and anic	nic polymeri	zation.	
Unit-II	Polyme	rization Reactions:-			
	Principl	es of polymer reactivity - Photolytic and electrolytic po	lymerization	reactions	
	- Photos	sensitized polymerization - Cyclopolymerization - Elect	rointiated		
	polymer	rization - Cross linking polymerization - Graft and block	copolymeriz	zation -	
Unit III	Polyme	rization Techniques :			
01111-111	Various	methods of polymerization - Solution bulk emulsion	and suspensio	on	
	polymer	rization- Comparative accounts.	and suspense	, II	
	Special	ity Polymers			
	-				
	Fire retardant polymers - thermally stable polymers -bio-degradable polymers -				
TT •4 TT7	conducting polymers, polymer electrolytes and liquid crystalline polymers.				
Unit-IV	Crystal Structure and Properties of Polymers:- Crystallisability – Polymer crystallization - Factors affectingcrystallisability –				
	Morphology of crystalline polymers – Effect of crystallisability on the properties of				
	polymers.				
	Glass transition temperature (Tg) and its determination and importance - Melting				
	tempera	ture - Physical properties of crystalline and amorphous	polymers.		
UNIT-V	Charac	terization of Polymers:-	1 . 1 . 0		
	Number average, weight average and viscosity average molecular weight of				
	and viscosity methods – Gel permeation chromatography method				
	Analysi	s and testing of polymer by FTIR spectroscopy – X-ray	diffraction –		
	Therma	l analysis (TG/DTA) - Physical testing.

Outcomes	The stud	lents will have advanced knowledge in:-			
	➤ The	students will understand the fundamental knowledge a	bout nomenc	lature	
	ofp	olymer and types.			
	> The	students will come to know about the basic principles	of polymer		
	read	ctivity, structure and properties.			

NON MAJOR ELECTIVE COURSES						
Course	SUBJECT: BASICS IN ENVIRONMENTAL	Credits:2	Hours: 54			
Code:53607	3 SCIENCE					
Objectives	The objectives of the course are to acquire basic knowledge	e in area of:-				
	To educate on the basic terminologies of the environm	nent				
	To develop knowledge about air, water and soil					
Unit I	For the awareness various pollutions and abatement	.8				
Unit-1	Definitions of environment, ecology, pollution. Types of po	ollution and				
	effects.Industrial effects on environment, general waste cat	egorization. H	lazardous			
	materials and their ill effects. Acid rain, photochemical smog, ozone hole and					
	green-house effect.					
Unit-II	Types of Pollution:-	1 1 11 /				
	rypes of pollution and effects: air pollution, water pollution pesticide pollution, thermal pollution, noise pollution, radiu	n, land polluti	on, on Basic			
	information about the nature and type of contaminants in it	dustrial efflue	ents of			
	tannery, distillery, paper and pulp, textile, fertilizer and ele	ctrochemical.				
Unit-III	Water pollution abatement:-					
	Basic information about the water pollution abatement met	hods: Pretreat	ment			
	A dyanced or tertiony treatment methods, Biological or second	ary treatment	methods,			
Unit_IV	Sustainable Development:-					
Unit-1 v	Industrial hazards: types, guidelines and safety methods, H	ealth hazards	due to			
	industrial chemicals in the category of poisons, corrosives	and flammab	les. The			
	need for Green Chemistry. Definition and 12 principles of Green Chemistry. Use of					
	non-traditional "Greener" alternatives for sustainable devel	lopment.				
UNIT-V	Recent advances in Sustainable Science:-					
	nhotochemical degradation enzymes for pulp and paper manufacture biochemical					
	removal of phosphorous: Exploring Green resources for dr	ug developme	nt,			
	essential oils.	0 1	,			
REFEREN	CES AND TEXTBOOKS:-

Trivedi, R. 1 Delhi.	Trivedi, R. N. (1998). <i>A Text book of Environmental Pollution Control</i> . Anmol Publications, New Delhi.					
Outcomes	The students will have advanced knowledge in:-					
	> The students will acquire basic knowledge about envir	ronment	thain agenter - 1			
Srivatsava, M. M. & Shangi, R. (2005). Chemistry for Green Environment. New Delhi: Narosa Publishers. Tchobanoglous, G. & Schroeder, E.D. (1985). Water Quality. Addison-Wesley, California. Trivedi, R. N. (1998). A Text book of Environmental Pollution Control. Anmol Publications, New Delhi. Outcomes The students will have advanced knowledge in:- ➤ The students will acquire basic knowledge about environment						

NON MAJOR ELECTIVE COURSES						
Course		SUBJECT:PHARMACEUTICAL CHEMISTRY	Credits:2	Hours:		
Code:53607	4			54		
Objectives	The ob	jectives of the course are to acquire basic knowledge in a	rea of:-			
	> To	provide the basic knowledge about the drugs.				
	► To	educate the basic details about the antibiotics, analgesic	s and other			
	ph T	armaceuticals.				
Ilu:4 I	F IC	b create awareness regarding the pharmaceutical awaren	ess.			
Unit-1	Import	aucuon:- tant terminologies-nharmaceuticals, drugs, nharmacodyna	mics			
	pharm	acokinetics, pharmacopoea, virus, bacteria, fungus, acting	mvcetes.			
	metabolites, antimetabolites, LD50 and ED50 - Therapeutic index- their use in					
	selecting drugs; assay of drugs - Use of plaster of paris in bone fracture.					
Unit-II	Antibi	otics and Vitamins:-				
	Antibi	otics-structure and uses of 59enicillin, chloramphenicol a	nd tetracyclir	nes –		
	Sulpho	onamides- action of sulpha drugs – uses of sulphadiazine,	sulphapyridi	ne,		
	sulpha	thiazole and sulphafurazole – Vitamins: classification as	water soluble	e and		
X • / XX	liquid	soluble vitamins, sources, deficiencies and assay of vit	amins A, B_1 ,	B_2 and C .		
Unit-III	Analg Narcot	esics and Antiseptics:-	na haroin an	4		
	codein	e - Synthetic analgesics-nethidine and methodone - Antir	vretic analge	sics-		
	action	of methyl salicylate, aspirin, paracetamol and phenacetin	- Antiseptics	and		
	disinfe	ectants-phenol as disinfectant and phenol coefficient.	1			
Unit-IV	Anaesthetics and Other Pharmaceuticals:-					
	Anaesthetics-classification as general, local and intravenous anaesthetics, chemistry of					
	anaesthetic ether, nitrous oxide, halothane, chloroform, thiopental sodium					
	methohexitone, cocaine and benzocaine - Alkaloids-detection of alkaloids, colour					
	cause and control of diabetes - Oral hypoglycemic agents - causes and control of					
	cause and control of diabetes - Oral hypoglycemic agents - causes and control of					
UNIT-V	Pharn	naceutical Aids:-				
	Organ	ic pharmaceutical aids-their role as preservatives and anti	oxidants, colo	ouring,		
	flavou	ring and sweetening agents and ointment bases - Blood-b	lood groups,	Rh		
	factor,	blood pressure normal, high and low - control of pressure	e - Causes an	d		
	contro	l of anaemia-antianaemic drugs, coagulants and anticoagu	ilants - Cause	es and		
DEFEDEN	contro	l of AIDS.

Outcomes	The st	udents will have advanced knowledge in:-				
	≻ Th	ne students will acquire basic knowledge about drugs and	their action.			
	≻ It	creates awareness about the various medicinal products a	vailable for n	nany		
	di	seases and critical conditions.				

	NON MAJOR ELECTIVE COURSES						
Course		SUBJECT: CHEMISTRY IN EVERYDAY	Credits:2	Hours: 54			
Code:536075		LIFE					
Objectives	 The objectives of the course are to acquire basic knowledge in area of:- To educate on the basic terminologies and functions of the drugs and vitamins. To develop knowledge about water and food used in daily life. To create awareness about the cleansing agents, cosmetics and colouring substances. To ensuride information magneting some of the important polymera. fuels 						
	ba	batteries, corrosion and prevention.					
Unit-I	Drugs and Vitamins:- Drugs: Definition – Classes of drugs: Antacids, Analgesics, Antibiotics, Antiseptics, Disinfectants, Tranquilizers, Antifertility Drugs. Vitamins: Water soluble vitamins: Vitamin B and C; Fat soluble vitamins: A, D, E & K - Sources - Physiological functions and deficiency symptoms.						
Unit-II	Water	Water and Food:-					
	Water: Hydrosphere - Hydrological cycle - Water quality parameters – Potable water - Types of water pollutants - organic, inorganic, toxic metals – Treatments: filtration, chlorination, adding bleaching powder, UV irradiation and Ozonation. Food: Artificial Sweetening Agents - Food Preservatives – Food additives						
Unit-III	Cleansing Agents:- Soaps - Preparation, Types, Disadvantages of soaps - Synthetic Detergents: Anionic Detergents, Cationic Detergents and Non-ionic Detergents - Advantages of synthetic detergents over soaps Chemistry in Cosmetics:- Creams – Perfumes – Talcum Powder – Deodorants						
	Chem – Clas	istry in Colouring Matter: Natural and synthetic col sification on the basis of Constitution and applications	ouring matters	s – Dyes			
Unit-IV	Chemistry of polymers:- Synthetic fibres - nylons, polyester – synthetic rubber - polyurethane rubber – reclaimed rubber - sponge, foam rubber, thermocole. Fuels and Energy Resources Types of fuels - liquid fuels - petroleum products – gaseous fuel - coal gas, producer gas and biogas - Rocket fuels - solid and liquid propellants - nuclear fuels - difference between nuclear and chemical fuels. Renewable sources of energy - solar energy, wind energy and tidal energy.						
UNIT-V	Batter Batter primar Corros preven inorga ename	y, Corrosion and Surface Coatings:- ies -Basic concepts, battery characteristics, classificati ry, secondary and reserve batteries, fuel cells and supe sion - Definition of chemical corrosion, types of corro ition- Pretreatment of the surface metallic coating, gal nic coatings, organic coatings, oil paints, water paints ls and lacquers.	on of batteries er capacitors. sion, corrosion vanizing, tinn , special paints	5– 1 ing, 5,			
REFERENC	CES AN	D TEXTBOOKS:-	1

Sharma, B. K. (2001). <i>Industrial Chemistry</i> (12 th ed.). Goel Publishing House. Shrive, George and T Austin. (1984). <i>Chemical Process Industries</i> . McGraw Hill Book Co.							

Outcomes	The students will have advanced knowledge in:-		
	Acquire basic knowledge about drugs and vitamins.		
	Get details about the constitution, pollution and usage of water and		
	composition and contamination of food.		
	Have awareness about the usage of cleansing agents and cosmetics.		
	> Be able to apply the knowledge of fundamental concepts of batteries, fuels,		
	corrosion and protection.		

NON MAJOR ELECTIVE COURSES						
Course		SUBJECT: POLYMERS AND PLASTICS: A	Credits:2	Hours:		
Code:536076		CHEMICAL INTRODUCTION		54		
Objectives	 The objectives of the course are to acquire basic knowledge in area of:- Polymers – nomenclature, types and uses. Plastics – classification, properties and uses. 					
Unit-I	Introduction:- Definition - Nomenclature of polymers - Functionality of monomers. Types of polymerization – addition, condensation and copolymerization. Homopolymers, copolymers and Block copolymers.					
Unit-II	Polymerization Reactions:- Principles of polymer reactivity - Photolytic and electrolytic polymerization reactions- Photosensitized polymerization - Cyclopolymerization - Electrointiated polymerization.					
Unit-III	Polymerization Techniques:- Various methods of polymerization - Solution, bulk, emulsion and suspension polymerization- Comparative accounts.					
Unit-IV	Plastics:- Introduction, Thermoplastics – amorphous, semi-crystalline - Thermoset plastics. Elastomers, Dendrimers. Biopolymers- polypeptides, nucleic acids and polysaccharaides.					
UNIT-V	Important polymers and plastics:- Polyethylene terephthalate (PET), Polyethylene (PE) – high density and low density, Polyvinyl chloride (PVC), Polypropylene (PP), Polystyrene (PS), Polyamide (PA, Nylon), Polyurethane foam (PUF), Polytetrafluoroethylene (PTFE) and Polyesters.

• 11 Years

Honours and Awards:

• YOUNG SCIENTIST AWARD, Department of Science & Technology (INDIA) – SERC Fast Track 2011-2014.

• Raman Fellowship for Post-Doctoral Research in USA for a period of 12 months at Department of Chemistry, University of Miami, USA, by the UGC, New Delhi(2017-2018).

Recent publications:

- Encapsulation of triclosan within 2-hydroxypropyl-β-cyclodextrin cavity and its application in the chemisorption of rhodamine B dye, Journal of Molecular Liquids, 282 (2019) 235-243.
- Poly (ethylene glycol) stabilized synthesis of inorganic cesium lead iodide polycrystalline light-absorber for perovskite solar cell, Materials Letters 240 (2019)132-135.

Cumulative Impact factor: 126.15 Total Citation: 976 h- index: 19 i10- index: 30
Name: Dr. G. GOPU Designation:Assistant Professor Address: Department of Industrial Chemistry Alagappa University Karaikudi – 630 003 Tamil Nadu, INDIA Phone: +91 4565228836, +91 9842368286 Fax: Email: gopug@alagappauniversity.ac.in, nggopi79@gmail.com

Educational qualification:

• M.Sc., PGDCA, Ph.D.,

Professional experience:

• 9 Years

Honours and Awards:

• Alagappa Excellence Award for Research – 2016, given by AURF, Alagappa University, Karaikudi.

Recent publications:

- Sonochemical driven simple preparation of nitrogen-doped carbon quantum dots/SnO₂nanocomposite: A novel electrocatalyst for sensitive voltammetric determination of riboflavin (2019)
- N-doped carbon quantum dots @ hexagonal porous copper oxide decorated multiwall carbon nanotubes: A hybrid composite material for an efficient ultra-sensitive determination of caffeic acid (2019)

Cumulative Impact factor:43.42 Total Citation: 170 h- index: 7 i10- index: 7

Name: Dr. S. Viswanathan Designation: Assistant professor Address: Department of Industrial Chemistry Alagappa University Karaikudi – 630 003 Tamil Nadu, INDIA Phone: +91 4565 228836, +91 944 322 3405 Fax: Email: rsviswa@gmail.com

Educational qualification:

• M.Sc., B.Ed., Ph.D

Professional experience:

• 17 Years

Honours and Awards:

- Extended senior research fellow- Council of industrial research and development, India-2003.
- Marie Curie Postdoctoral fellow- European Union Marie Curie Actions Transfer of Knowledge- 2007.

Recent publications:

- Voltammetric immunosensor for the simultaneous analysis of the breast cancer biomarkers CA 15-3 and HERZ-ECD (2018)
- Label free Voltammetric Immunosensor for Prostate Specific Antigen Detection (2018)

Cumulative Impact factor: 139 Total Citation: 1876 h- index: 25 i10- index: 33

Name: Dr. N. SENGOTTUVELAN Designation: Assistant professor Address: Department of Industrial Chemistry Alagappa University Karaikudi – 630 003 Tamil Nadu, INDIA Phone: +91 9488260744 Fax: Email: nsvelan1975@yahoo.com

Educational qualification:

• M.Sc., B. Ed., Ph.D.

Professional experience:

• 11 Years

Honours and Awards:-

Recent publications:

- Investigation on biomolecular interactions of nickel(II) complexes with monoanionic bidentate ligands
- *In-situ* nickel(II) complexes of 3-(dimethylamino)-1-propylamine based Schiff base ligands: Structural, electrochemical, biomolecular interaction and antimicrobial properties

Cumulative Impact factor: 94.2 Total Citation: 608 h- index: 14 i10- index: 20

Name: Dr. S. Umadevi Designation: UGC Assistant professor Address: Department of Industrial Chemistry Alagappa University Karaikudi – 630 003 Tamil Nadu, INDIA Phone: +91 4565223246, +91 9488120794 Email: umadevilc@gmail.com

Educational qualification:

• M.Sc., Ph.D.

Professional experience:

- 2014- till date UGC Assistant Professor under Faculty Recharge Programme Department of Industrial Chemistry, Alagappa University, Karaikaudi, Tamilnadu
- 2012-2014 CECRI, Karaikudi, India Women Scientist (WOS-A) DST, New Delhi
- 2011-2012 University of Manitoba, Canada— Postdoctoral research with Dr. Torsten Hegmann

Honours and Awards:

- Early Career Research (ECR) Award from Science and Engineering Research Council (SERB), India.
- Selectee in Faculty Recharge Programme from UGC as UGC Assistant Professor, 2013
- Lectureship from CSIR, India
- 2 Gold medals for performance in M.Sc. Chemistry II rank, Mysore University, Mysore
- 2 Gold medals for performance in B.Ed. I rank, Mysore University, Mysore
- 5 Gold medals for performance in B.Sc. I rank, Mysore University, Mysore

Recent publications:

- R. Mangaiyarkarasi, S. Selvam, V. Ganesh and S. Umadevi, (2019) Cholesterol based imidazolium ionic liquid crystal: Synthesis, characterisation and its dual application as an electrolyte and electrode material, *New J. Chem.* **43**, 1063 1071 (**I. F.-3.0**)
- B.Sivaranjini, R. Mangaiyarkarasi, V.Ganesh and S. Umadevi, (2018)Vertical Alignment of Liquid Crystals Over a Functionalized Flexible Substrate, Scientific Reports, 8:8891, 1-19 (I. F.-4.5)

Cumulative Impact factor: 115.73 Total Citation: 383 h- index: 12 i10- index: 13

Name: Dr. P. Muthu Mareeswaran Designation: DST INSPIRE Faculty Address: Department of Industrial Chemistry Alagappa University Karaikudi – 630 003 Tamil Nadu, INDIA Phone: +91 9790963437 Fax: ______ Email: mareeswaran@alagappauniversity.ac.in, muthumareeswaran@gmail.com

Educational qualification:

• M. Phil., Ph.D.

Professional experience:

• 4.8 Years

Honours and Awards:

- Brain Pool Korea Fellowship, South Korea
- DST INSPIRE Faculty Award

Recent publications:

- Selective Carbon Dioxide Capture Using Silica Supported Polyaminals (2019)
- Imine-linked polymer/silica composites for CO₂ sequestration (2019)

Cumulative Impact factor: 49.29 Total Citation: 277 h- index: 11 i10- index: 12
