<sup>\*</sup>The Syllabus of Professional English for III & IV Semester will be provided after Receiving the syllabus from TANSCHE.

As per TANSCHE, the Professional English book will be taught to all four streams apart from the existing hours of teaching/additional hours of teaching (1hour/day) as a 4 credit paper as an add on course on par with Major paper and completion of the paper is a must to continue his/her studies further.

- > TOL-Tamil/Other Languages,
- ightharpoonup E English
- > CC-Core course -Core competency, critical thinking, analytical reasoning, research skill & teamwork
- > Allied -Exposure beyond the discipline
- ➤ AECC- -Ability Enhancement Compulsory Course (Professional English & Environmental Studies) Additional academic knowledge, psychology and problem solving etc.,
- > SEC-Skill Enhancement Course Exposure beyond the discipline (Value Education, Entrepreneurship Course, Computer application for Science, etc.,
- ➤ NME -Non Major Elective Exposure beyond the discipline
- ➤ DSE Discipline specific elective -Student choice either or
  - Internship
  - If internship Marks = Internal =150 (75+75) two midterm evaluation through Viva voce and External 250 marks (Report =150 +Viva Voce=100) =Total 400 marks
  - Theory papers or
  - Project + 3 theory papers.
- ➤ MOOCs Massive Open Online Courses
  - \* T- Theory, P- Practical

<sup>\*</sup>Machine Learning - Government Colleges

<sup>\*\*</sup> Android App - Government Aided College

<sup>\*\*\*</sup>Cyber Security - Self -Financing College

#### **Practical Subjects:**

The following list of parameters taken into account for the evaluation of practical examination. *Total Marks: 100 (Internal: 40 marks, External: 60 Marks)* 

#### **Parameters:**

#### For Internal Marks:

i. Internal test: 20 ii. Record Work: 20

Total: 40

#### **For External Marks:**

| i.   | Aim, Procedure / Algorithm and Program: | 15 |
|------|---|----|
| ii.  | Coding and Compilation:                 | 15 |
| iii. | Debugging:                              | 15 |
| iv.  | Results:                                | 15 |
|      |   |    |

Total: 60

#### For Project Work:

- 1. The students will be allowed to work on any project based on the concepts studied in core/elective courses.
- 2. The project work should be compulsorily done in the college only under the supervision of the department staffs.
- 3. The combined project shall be undertaken by the students as a team of two.
- 4. The number of teams should be equally assigned to existing Staff members.
- 5. The following list of parameters taken into account for the evaluation of Project work and Vivavoce.

Total Marks: 100 (Internal: 40 marks, External: 60 Marks)

#### **Parameters:**

For Internal Marks: Two review meetings:  $2 \times 15 = 30$  Marks Overall Performance: = 10 Marks

For External Marks: Project Report: 20 Marks

Project demo &Presentation: 20 Marks Viva-Voce: 20 Marks

Schaum's Outline Series, Gottfried, Tata McGraw Hill, 2006 Programming with C,

Outcomes

Students gain knowledge to develop C Programs.

Students were able to apply and implement programs for solving real world problems.

| Object Or   | iented Programming with C++, E. Balagurusamy, Sixth Edition-2013, M                       | [cGraw  | v Hill  |        |  |  |  |  |
|             | (India) Private Limited, New Delhi.   |         |         |        |  |  |  |  |
|             | UNIT I – Chapter 1 (Except 1.3, 1.4).   |         |         |        |  |  |  |  |

UNIT I – Chapter 1 (Except 1.3, 1.4),

Chapter 2 (Only 2.6),

Chapter 3 (Except 3.20, 3.21, 3.22), Chapter 4

UNIT II – Chapter 5 (Except 5.18, 5.19), Chapter 6 (Except 6.8, 6.9, 6.10)

UNIT III – Chapter 7, Chapter 8

UNIT IV – Chapter 9, Chapter 10

UNIT V – Chapter 11 (Except 11.8), Chapter 12 (Only 12.2, 12.3 and 12.4)

#### **Books for Reference:**

C++ - The Complete Reference, Herbert Schildt, TMH, 1998.

C++ How to Program, Paul Deitel, Harvey Deitel, PHI, Ninth edition (2014).

Ashok N.Kamthane, Object Oriented Programming with ANSI & Turbo C ++, Pearson Education, 2006.

Object-Oriented Programming With C++, Poornachandra Sarang, 2nd Edition, PHI Learning Private Limited, New Delhi, 2009.

Object-Oriented Programming Using C++, Alok Kumar Jagadev, Amiya Kumar Rath

And Satchidananda Dehuri, Prentice-Hall of India Private Limited, New Delhi, 2007.

#### **Outcomes**

- Students gain knowledge to develop Object Oriented Programs.
- Using the OOPS Concepts Students were able to solve real-time problems.

Programming with java, E.Balagurusamy TMH, 4th Edition.

#### **Books for Reference:**

Java 2- The Complete Reference, Herbert Schildt, 5th Edition (2002), McGraw Hill Education (India) Private Limited.

Programming with Java (Schaum's Outline Series), John R.Hubbard, 2<sup>nd</sup>Edition(2004), McGraw-Hill International Editions.

Programming in Java2, By Dr.K.Somasundaram, Publisher: First Edition JAICO Publishing House,

#### **Outcomes**

- Students will able to understand the Java programming concepts. Students will able to apply concepts and methods for real-time problems.

|                             | 2. Prograi        | m to calculate area of Square and Rectangle using Method Overloading   |        |           |  |  |  |  |
|                             | 3. Prograi        | m to implement User-Defined Exception (minimum 3 types of excep  | tion s | hould be  |  |  |  |  |
|                             | used).            |  |        |           |  |  |  |  |
|                             | 4. Create         | two threads such that one of the thread generate Fibonacci series  | and a  | another   |  |  |  |  |
|                             | genera            | ate perfect numbers between two given limits.  |        |           |  |  |  |  |
|                             | 5. Using o        | command line arguments, test if the given string is palindrome or not.   |        |           |  |  |  |  |
| Group- B                    | 6. Prograi        | m to perform Matrix Addition and Multiplication using class.   |        |           |  |  |  |  |
|                             | 7. Prograi        | m to perform the String operations. (Reverse, Copy, Concatenate, Comp  | oare)  |           |  |  |  |  |
|                             | 8. Prograi        | m to display student mark details using Single Inheritance.  |        |           |  |  |  |  |
|                             | 9. Using          | multilevel inheritance process student marks.  |        |           |  |  |  |  |
|                             | 10. Impler        | ment multiple inheritance for payroll processing.  |        |           |  |  |  |  |
|                             | 11. Prograi       | m to implement banking transaction using Interface.  |        |           |  |  |  |  |
|                             | 12. Prograi       | 12. Program to implement Multiple Thread.  |        |           |  |  |  |  |
|                             | 13. Prograi       | m to implement Package.  |        |           |  |  |  |  |
| Note:<br>One Que<br>Examina |                   | roup A and another one Question from Group B is compulsory   | for U  | niversity |  |  |  |  |
| Outcomes                    |                   | nts were able to solve real world problems using Java collection framewats were able to write and execute programs using various methods and |        | pts.      |  |  |  |  |

**Objectives** The following concepts must be introduced to the students:

#### **DDL Commands**

• Create table, alter table, drop table

#### **DML Commands**

- Select, update, delete and insert statements
- Condition specification using Boolean and comparison operators (and, or,not,=,<>,>,<,>=,<=)
- Arithmetic operators and aggregate functions (Count, Sum, Avg, Min, Max)
- Handling Multiple table queries
- Arranging using order by

## PL/SQL Programming

- Simple PL/SQL programs with Table handling
- Concepts of Trigger, Procedures and Cursor
- 1. Create a student table with the following attributes name, register number, department, marks in 5 subjects and total.
- (a) Insert few records into student table.
- (b) Display all the records
- (c) Calculate the total marks for all the records.
- (d) Display the information of student name, register number and total only.
- 2. Create a student table with the following attributes name, registernumber, department, marks in 5 subjects and total.
- (a) Insert few records into student table.
- (b) Modify the name of the student as vignesh whose register number is 211278019.
- (c) Delete the records whose register number is 211278005.
- (d) Display all the records.

#### Group- A

- 3. Create a table student with name, roll number, gender, age and mobile number. Apply the following integrity rules to the student table
- (a) The student name must be in capital letter.
- (b) The roll number must be greater than zero.
- (c) The age cannot be a null value.
- (d) The gender must be "Male" or "Female" or "Transgend"
- (e) The mobile number may contain null values.
- 4. Create a table student\_master with the following attributes name, regno, dept and year of joining with suitable data types. Use Select command to do the following.
- (a) Display all the column in the student master table.
- (b) Display the student's name column only.

- (c) Eliminate the duplicate entry in student mastertable.
- (d) Select the details of student who is studying computer science department
- (e) Sort the attribute name in alphabetical order.
- 5. Create a table sales\_order\_details with the s\_order\_no as primary key and it contains the following fields: product\_no, description, qty\_ordered, qty\_disp, product\_rate, profit\_percent, sell\_price, supplier\_name. Use Select command to do the following
- (a) Select each row and compute sell\_price\*.50 and sell\_price\*1.50 for each row selected.
- (b) Select product\_no, profit\_percent, Sell\_price where profit\_per is not between 10 and 20 both inclusive.
- (c) Select product\_no, description, profit\_percent, sell\_price where profit\_percent is not between 20 and 30.
- (d) Select the suppliername and product\_no where suppliername has 'r' or 'h'as second character.
- 6. Create an Employee table with the following attributes: employee\_number, name, job and manager\_id. Set the manager\_id as a foreign key for creating self referential structure.
- (a) Insert few records
- (b) Display all the records
- (c) Display the employee details who are working under particular manager id.
- 7. Create an Employee table with the following attributes: employee\_number, employee name, department number, job and salary.
- (a) Query to display the employee\_name and Salary of all the employees earning more than 20000 INR.
- (b) Query to display employee\_name and department\_number for the particular employee number.
- (c) Query to display employee\_name and Salary for all employees whose salary is not in the range of INR 15000 and INR 30000.
- 8. Create an Employee table with the following attribute employee\_number, employee name, job type, hire date, department number and salary.
- (a) Query to display employee\_name and department\_number of all the employees in department number 10 and Department number 20 in the alphabetical order by name.
- (b) Query to display Name of all the employees where the third letter of their name is =A.
- (c) Query to display Name with the 1<sup>st</sup> letter capitalized and all other letter lowercase
- (d) Query to display Name of all employees either have two R's or have two A's in

their Name.

- 9. Create an Employee table with the following attributes: employee number, name, job, hire date and manager id. Set the manager id as a forein key for creating selfreferential structure.
- (a) Query to display name and Hire Date of every Employee who was hired in 2007.
- (b) Query to display name and calculate the number of months between today and the date each employee was hired.
- (c) Query to display name and job of all employees who don't have a current Manager.
- Create a table sales order with s order no, client number, delivery address. delivery date and order status. Define the s order no as primary key using column level Constraints.
  - (a) Create another table named as sales order copy with the same structure of sales order table. Define the s order no as primary key using table level constraints.
  - (b)Add a new column for storing salesman number in sales order using ALTER Command.
  - (c) Modify the size of delivery address in sales order table using ALTER command.
  - (d)Display the structure of sales order table
- Create an Employee table with the following attribute employee number, 11. employee name, job type, hire date, department number, salary and commission.
  - (a) Query to display the Highest, Lowest, Sum and Average Salaries of all the **Employees**
  - (b) Query to display the employee number and employee name for all employees who earn more than the average salary.
  - (c) Query to display the employee name, salary and commission for all the employees who earn commission.

#### Group- B

- (d)Sort the data in descending order of salary and commission
- (e) Query to display employee name, salary and commission for all employees whose commission is greater than their salary increased by 5%.
- Create a DEPARTMENT table with the attributes of department number and department name. Set the department number as a primary key.
  - (a) Insert few records
  - (b)Display all the records
  - (c) Create an employee table with the following attribute employee number, employee name, job and department number. Set the employee number as a primary key and set the department number as a foreign key.
  - (d)Query to display the employee details who are working in the particular department number.
  - (e) Query to display employee number, employee name and job from the employee
  - (f) Query to display unique jobs from the employee Table
  - (g)Query to display the employee name concatenated by a job separated by a comma.

- 13. Create a DEPARTMENT table with the attributes of department\_number and department name. Set the department number as a primary key.
  - (a) Create an Employee table with the following attributes: employee\_number, name, job type, department number and location.
  - (b) Query to display Unique Listing of all Jobs that are in department\_number 20.
  - (c) Query to display employee name, department\_name and department\_number for all the employees.
  - (d) Query to display name, Job, department\_number and department\_name for all the employees working at the Mumbai location.
- 14. Create a table client-master with the following fields: client\_no, name, address, city, state, pincode, remarks, bal due with suitable data types.
  - (a) Create another table supplier master from client master.
  - (b) rename the attribute client\_no with supplier\_no and the attribute **name** with supplier name in the supplier master table
  - (c) Insert data into client master
  - (d) Insert data into supplier master from client master.
  - (e) Delete the row which is having the value chennai in the city attribute of client master table.
  - (f) Drop the client master table
- 15. Create a table master\_book to contain the information of magazine\_code, magazine\_name and publisher, magazine\_type (Weekly/biweekly/monthly) and price. Write a PL/SQL block to perform insert, update and delete operations on the above table
- 16. Create a table to contain phone\_number, user\_name, address of the phone user. Write a function to search for an address using phone numbers.
- 17. Create a table to store the salary details of the employees in a company. Declare the cursor to contain employee\_number, employee\_name and net\_salary. Use cursor to update the employee salaries.
- 18. Create a table to contain the information about the voters in a particular constituency. Write a proper trigger to update or delete a row in the table.
- 19. Create a table employee to contain the information of employee\_name, employee number and salary.
- (a) Write a procedure to increase 10% of salary to all employees (procedure without argument).
- (b) Write a procedure to increase specific percentage for specific department number (procedure with argument).

#### Note:

One Question from Group A and another one Question from Group B is compulsory for University Examination

#### **Outcomes**

- Students were able to work with various queries
- Students were able to know about database concepts, triggers, cursor programming etc.

|                         | Semester - IV   |        |  |  |  |  |  |  |  |
|-------------------------|---|--------|--|--|--|--|--|--|--|
| Course code<br>22BCE5P2 | Core Practical-VI T/P C H/V PYTHON PROGRAMMING LAB P 4  | W<br>6 |  |  |  |  |  |  |  |
|                         | Acquire programming skills in core Python.  |        |  |  |  |  |  |  |  |
| Objectives              | Acquire Object-oriented programming skills in Python.   |        |  |  |  |  |  |  |  |
|                         | <ul> <li>Develop the skill of designing graphical-user interfaces (GUI) in Python.</li> </ul>   |        |  |  |  |  |  |  |  |
|                         | Develop the ability to write database applications in Python.   |        |  |  |  |  |  |  |  |
|                         | <ol> <li>Write a Python program that accepts an integer (n) and computes the value o<br/>n+nn+nnn.</li> </ol>   | f      |  |  |  |  |  |  |  |
|                         | 2. Write a Python program to compute the distance between the points (x1, y1) and (x2, y2).   | d      |  |  |  |  |  |  |  |
|                         | 3. Write a Python program to convert seconds to day, hour, minutes and seconds.   |        |  |  |  |  |  |  |  |
|                         | 4. Write a Python program to compute the greatest common divisor (GCD) of two positive integers.  |        |  |  |  |  |  |  |  |
|                         | 5. Write a Python program to convert an integer to binary keep leading zeros.   |        |  |  |  |  |  |  |  |
|                         | 6. Write a Python program to count the number occurrence of a specific character in a string.   |        |  |  |  |  |  |  |  |
|                         | 7. Write a Python function to find the maximum and minimum numbers from a sequence of numbers. Do not use built-in functions.   |        |  |  |  |  |  |  |  |
| Group- A                | 8. Write a Python program to find the number of divisors of a given integer is ever or odd.   |        |  |  |  |  |  |  |  |
|                         | 9. Write a Python program that accept a positive number and subtract from this number the sum of its digits and so on. Continues this operation until the number is positive. |        |  |  |  |  |  |  |  |
|                         | 10. Write a Python program to get a string from a given string where all occurrence of its first char have been changed to '\$', except the first char itself.                | S      |  |  |  |  |  |  |  |
|                         | 11. Write a Python program to count occurrences of a substring in a string.   |        |  |  |  |  |  |  |  |
|                         | 12. Write a Python function that takes a list of words and return the longest word and the length of the longest one.   | d      |  |  |  |  |  |  |  |
|                         | 13. Write a Python program to count the number of strings where the string length is 2 or more and the first and last character are same from a given list of strings.        | S      |  |  |  |  |  |  |  |
|                         | 14. Write a Python function to sum all the numbers in a list.   |        |  |  |  |  |  |  |  |
|                         | 15. Create a dictionary and apply the following methods: Print the dictionary items access items, use get(), Change values, use len()   | \$,    |  |  |  |  |  |  |  |

16. Create a tuple and perform the following methods: Add items, len(), check for item in tuple, Access items 17. Write a python program to create two sets and perform the following operations: Union, Intersection, Difference, Asymmetric Difference. 18. Write a Python script to check whether a given key already exists in a dictionary. 19. Write a Python program to check whether an element exists within a tuple. 1. Write a Python function to calculate the factorial of a number (a non-negative integer). The function accepts the number as an argument. 2. Write a Python function that checks whether a passed string is palindrome or not. 3. Write a Python class which has two methods get String and print String. get String accept a string from the user and print String print the string in upper case. 4. Write a Python class named Circle constructed by a radius and two methods which will compute the area and the perimeter of a circle. 5. Write a Python program to count the number of lines in a text file. 6. Write a python program to define a module to find Fibonacci numbers and Group-B import the module to another program. 7. Write a script named copyfile.py. This script should prompt the user for the names of two text files, the contents of the first file should be input and written to the second file. 8. Demonstrate a python code to print try, except and finally block statements 9. Write a 2D Graphics program for the following (a) Draw a Star (b) Draw a letter (c) Draw a hexagon with color. 10. Write a python program to animate an object from left to right and right to left. 11. Write a python program for displaying the database records from SQL.

#### Note:

One Question from Group A and another one Question from Group B is compulsory for University Examination

#### **Outcomes**

- Students were able to understand the concept of Python programming.
- Students were able to execute programs for real time applications.

12. Write a python program to demonstrate the use of Java program.

| Objectives  | <ul> <li>To develop an understanding of the ways that mobile technologies can be used for teaching and learning.</li> <li>To understand the impact of mobile computing on the field of education.</li> </ul>   |                     |     |   |     |  |
| Unit -I     | <b>Introduction:</b> Laptop computing – Wireless Technologies – Mobility and Portability – Overview of IP and Routing – Mobile networking – Example Architectures – The role of IETF in mobile networking.   |                     |     |   |     |  |
| Unit-II     | Cellular communication concepts: Wireless transmission – Multiplexing –Modulation – Spread Spectrum – Cellular system – GSM architecture – protocols – handover procedure – security.  |                     |     |   |     |  |
| Unit -III   | Advertisement and registration: Agent solicitation and Discovery Mechanism – Router Discovery Protocol – Agent advertisement – Agent operation – Agent discovery – registration overview – Authentication overview – Registration request, reply and extensions – Mobile node registration procedures – Foreign agent registration actions – Home agent Processing |                     |     |   |     |  |
| Unit -IV    | Data grams and route optimizations: Tunneling overview and terminology—<br>Encapsulation — Routing failures — Tunnel management — Decapsulation — Unicast broadcast and multicast data gram routing — Mobile routers — Route optimization — Message format — Extensions — Mobile key requests.   |                     |     |   |     |  |
| Unit -V     | IP versions and DHCP: Mobility support in IP version 6 – smooth hand off – Renumbering – DHCP – WAP protocol.  Security and motivation detection: Ingress filtering – Reverse tunneling – Broadcast preference extensions – Movement detection – Localizing registrations.   |                     |     |   |     |  |
